

Fluorinated Aromatic compounds

One of Apollo's foremost areas of expertise is in the manufacture of fluorinated intermediates and in our labs our main focus is on bringing novel compounds through into our catalogue. Therefore many of the new products we are manufacturing will be unique to Apollo.

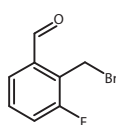

We are also actively engaged in custom synthesis, with particular expertise in aromatic, heterocyclic and fluorinated compounds. We welcome your custom synthesis enquiries and hope to continue supporting your projects from conception and beyond. The following fluorinated compounds are all available from stock, having been developed in our UK lab.
