Who we are

A leading European manufacturer of culture media

Founded in 1960 we are one of the main European manufacturers of dehydrated culture media for microbiology and molecular biology, which positions us today as a leading international privately held company.

From our factory in Madrid, Spain we export to more than 130 countries all over the world, directly and through authorized distributors. Our wide distribution network along with our highly skilled staff, quality and specialized product range, are the keys to our success.

Inspiring the future.

What we do

Develop, manufacture and distribute high quality culture media for micro and molecular biology

The experience acquired in the design and manufacture of culture media has matured us as specialists in the field of microbiology. We design and produce more than 700 dehydrated culture media. Condalab is also recognized for providing key ingredients such as agars, peptones and agaroses, among other products. Our catalog also includes media solutions for a wide range of molecular biology application

Who we do it for

We have forged an increasingly large network of clients as a result of our ability to listen as well as our commitment towards finding optimal solutions.

Condalab products address the following sectors:

Clinical analyses.

Hospitals, veterinary clinics, clinical and food analysis laboratories.

Quality controls.

Food, beverage, breweries. Pharmaceutical industry, veterinary and cosmetic products.

Production processes.

Fermentation processes, vaccine manufacturing, probiotic products, prepared media manufacturers.

R&D.

Laboratories, research centers, universities.

How we do it

We take compliance seriously

Condalab continuously improves and increases its production to meet the highest international quality standards. We comply with the ISO 9001:2015, ISO 13485:2018 and European Community CE marking for in vitro medical devices.

Our formulations comply with various international standards such as ISO, European Pharmacopoeia, FDA, APHA, USP and AOAC. We follow strict quality control procedures before, during and after the manufacturing process to guarantee products of absolute quality and consistency from batch to batch.

We follow strict quality control procedures before, during and after the manufacturing process.

MICROBIOLOGY

Culture media.

Endorsed by more than 60 years of experience in the design and manufacturing of products for micro and molecular biology, Condalab offers one of the widest ranges of microbiological culture media on the market. The high quality raw materials used in its production, as well as the strict quality controls carried out throughout the process, makes Condalab's culture media the best option for your laboratory; guaranteeing maximum recovery and performance. The product catalog includes more than 700 media in dehydrated format as well as ready-to-use.

Dehydrated culture media.

Dehydrated culture media has a wide variety of applications in industrial microbiology (food industry, cosmetics, pharmaceuticals, vaccine production, animal health, analysis laboratories, etc.), as well as clinical microbiology (human and veterinary). The dehydrated powder form gives the culture medium a longer lifetime of up to 5 years, allowing them to be prepared easily.

Ready-to-use media.

Culture media preparation requires specialized personnel and time, in addition to the quality controls of the batch itself. Ready to use culture medium offers industry professionals security, easy use and time optimization, simplifying day-to-day work. Condalab products are available in a wide variety of presentations (90 mm, 55 mm and contact plates) and different medium formats such as tubes, bottles and bags, as well as products for the control of clean rooms and sterile environments.

Chromogenic media.

A chromogenic culture medium is a microbiological medium suitable for incubation, differentiation or selection of many microorganisms using a chromogenic substrate that results in a color change. This color will be characteristic of each microorganism being easier and more precise differentiation. Condalab offers a complete range of chromogenic media under **CondaChrome®** trademark that shorten the time of classical methods.

Supplements and additives.

In order to increase a given culture medium selectivity, a supplement or additive not included in the medium (due to its sensitivity to sterilization temperature) must be added on certain occasions, to ensure the isolation and identification of specific microorganisms. Condalab supplements are now available in freeze-dried vials and in vials with sterile solutions, without the need for previous dissolution.

Bacteriological stains.

Stains and dyes are mainly used in procedures for microorganism differentiation and identification, based on specific characteristics of bacteria. This step is of vital importance when identifying a microorganism and establishing a reliable clinical diagnosis in microbiology and pathological anatomy.

Antimicrobial susceptibility testing.

The analysis of microorganism sensitivity to different antimicrobial agents is a key point in any clinical microbiology laboratory. This analysis is carried out by means of an antibiogram; the objective of which is to evaluate in a laboratory the response of a microorganism to battery of antibiotics or antifungals.

Antibiotic discs.

These discs (6 mm) are prepared by impregnating high quality absorbent paper with accurately determined amounts of antibiotic or other chemotherapeutic agents. It is used in antibiogram techniques which allows to in vitro subject a standard bacterial inoculum to one or different antibiotic concentration to predict in vivo effectiveness.

MIC strips.

MIC strips are quantitative assays that enable the Minimum Inhibitory Concentration (MIC) determination of antimicrobial agents against microorganisms and detecting the resistance mechanisms. These strips consist of an absorbent paper strip calibrated with a MIC scale in µg/ml and code(s) to identify the antimicrobial agents.

Ingredients.

Over 60 years of experience makes Condalab a true expert in the whole development process of culture media which is why we also offer all the necessary raw materials for the manufacturing of media.

Agars.

Agar is a polysaccharide that can be found in some marine algae cell walls. Condalab's agar is obtained from those species that provide a higher quality performance such as *Gelidium* algae. Agar is the gelling agent in solid culture media. The high-quality agar offered by Condalab has no impurities and is microbiologically neutral, to obtain the best results in culture media preparation and other applications.

Peptones.

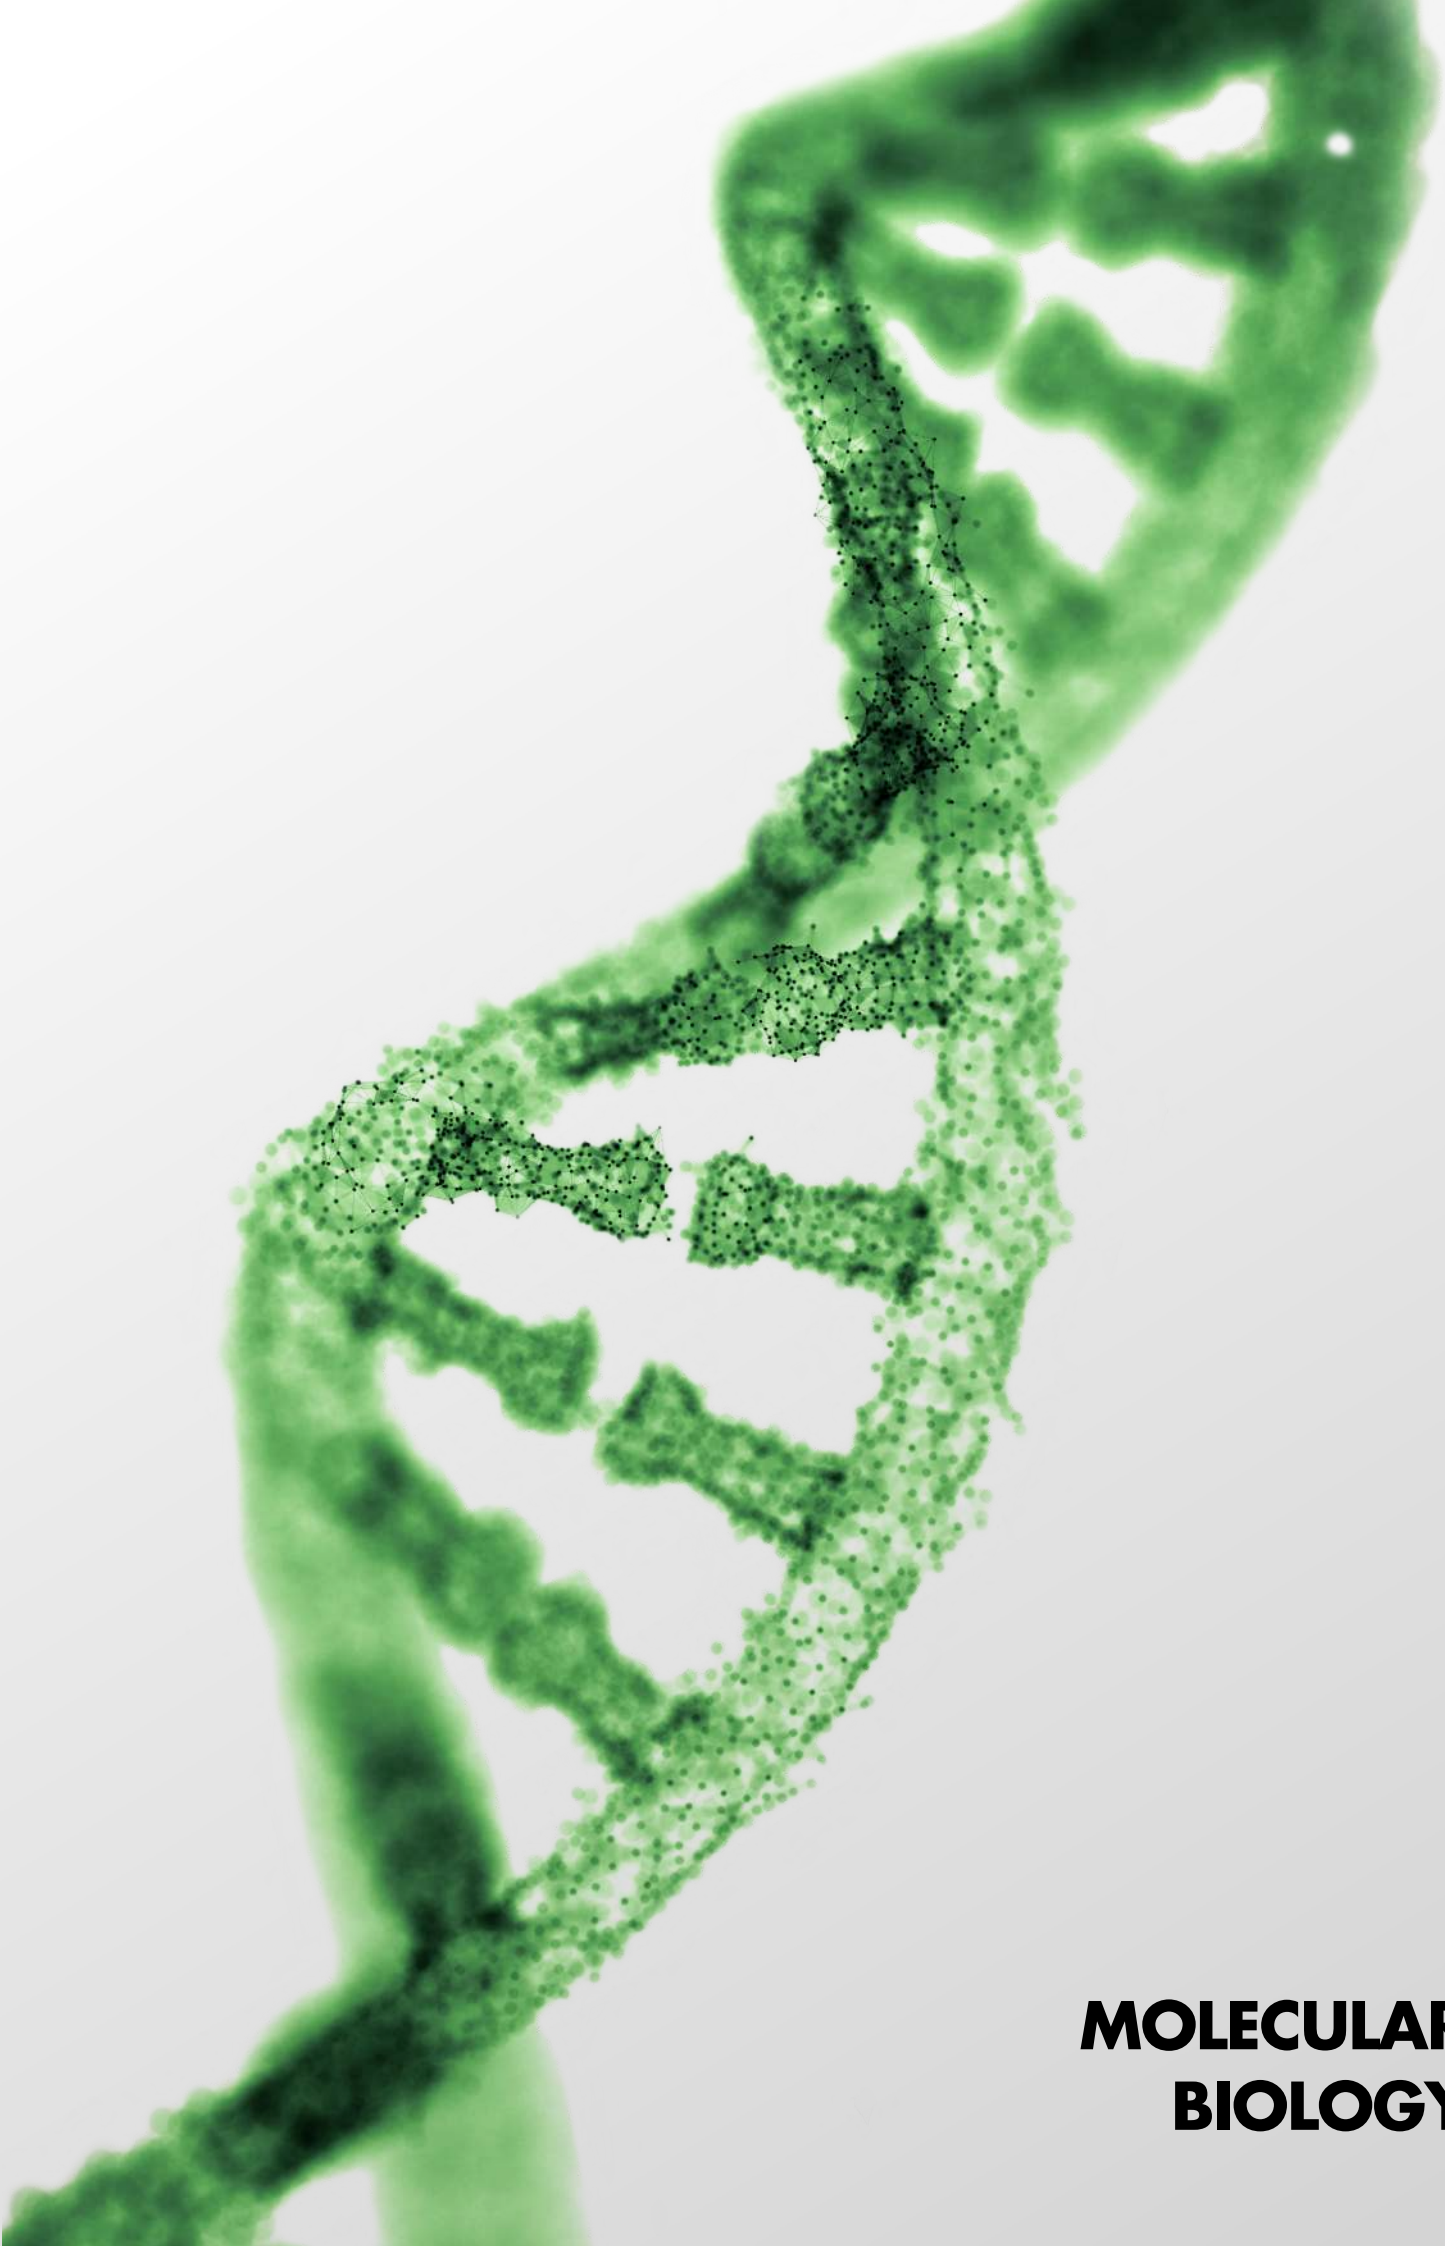

Peptones, protein of vegetable or animal origin digests, constitute a mixture of amino acids and polypeptides easily assimilated by microorganisms. In its catalog, Condalab offers a wide range of peptones and extracts to be used in the manufacturing of microbiological culture media and bacterial fermentation's.

Carbohydrates.

Carbohydrates are the main source of carbon in culture media. They are essential to provide a high nutritional value and even act as selective agents depending on the capacity of microorganisms to ferment.
