## That's new

Our intention is to add innovative products to our portfolio constantly for your research needs:

- New enzymes like dsDNase for highly specific degradation of doubled-stranded DNA and Zymolyase® to produce yeast protoplast or spheroplast
- Tergitol™ as an alternative to Triton X-100
- Easy Peel 2D HPE™ gels for blotting of horizontal 2D gels
- New protein standards, e.g. SERVA Unstained Protein Standard 6.5 - 97 kDa
- BlueVertical™ PRiME™ Blot Modul for SERVA's BV-104 electrophoresis tank
- IPG tray with electrode lid for 1<sup>st</sup> dimension protein separation on 7 cm to 24 cm IPG strips
- Special Pharma Edition of SERVA BlueStain automated gel staining device

## Our services

Benefit from SERVA's expertise in development and manufacturing, know-how and technical competence.

This is our platform of outstanding customer services – All you need to succeed:

- Educational: workshops, seminars, webinars
- Instrument qualification: IQ/OQ/PQ
- Sample-to-result development: customer specific gel electrophoresis applications
- Customized reagents: sourcing, larger pack sizes, production of buffers and solutions

## About us

SERVA products are present in your labs worldwide - the bench is our playground. The company's commitment „Serving Scientists“ is your invitation to the BlueWorld: explore our products, innovations and services. SERVA fulfills highest standards in quality management to deliver consistent product performance and continuity of supply. SERVA is ISO certified and committed to working safety and environmental protection.

Chromopeptide with antibiotic activity. Contains 2 cyclic peptides bound to the chromophoric phenoxazine ring. Binds specifically to the minor groove of the DNA double helix, and thus prevents it from being a template for RNA synthesis. Antineoplastic agent which inhibits the growth of rapidly dividing cells. Induces apoptosis in cancer cells. Used as a selective agent in cell culture.

Storage temperature +2 °C to +8 °C

Irreversible inhibitor of thrombin and other serine proteases (e.g. chymotrypsin, kallikrein, plasmin, proteinase K, trypsin). Inhibits by acylation of the active site of the enzyme. AEBSF is water-soluble and much less toxic than PMSF and DFP. Aqueous solutions are stable between pH 5 - 6; limited stability above pH 7.5.

Assay (HPLC) min. 98.0 %

### ■ Albumin Bovine Fraction V, Very Low Endotoxin, Fatty Acid-free lyophil.

(BSA)

M<sub>r</sub> ca. 67 000 ♦ CAS [9048-46-8]

EINECS 232-936-2 ♦ WGK 1 ♦ HS 35029020

Storage temperature -15 °C to -25 °C

Manufactured by a proprietary heat-shock fractionation process, followed by treatment to lower fatty acids and lipids. The production process includes steps to ensure low endotoxin and IgG levels. Tested negative for mycoplasma and the bovine viruses BVD, IBR, P13, Adeno, Parvo, Rabies, Reo and Bluetongue, in accordance with 9 CFR 113.

Especially designed as growth factor in albumin supplemented culture media for animal cells and microorganisms. Excellent growth medium supplement for hybridomas and the production of monoclonal antibodies. Suitable for *in vitro* binding and transport studies.

(BSA)

M<sub>r</sub> ca. 67 000

WGK 1 ♦ HS 35029020

Storage temperature +2 °C to +8 °C

Higher avidity exclusively controlled through pure albumin polymerisation. Does not contain artificial avidity enhancers or high molecular weight agglutination potentiators (e.g. PVP, gum acacia, or dextran). Does not contain caprylic acid or other stabilizers. IgG not detectable. Suitable as diluent/stabilizer in various RIA and EIA test systems, for various serological reagents, and for cross-matching procedures and antibody screening or titration.

HS 35029020  
Storage temperature +2 °C to +8 °C

Suitable as cell culture supplement that functions as a carrier protein for fatty acids, growth factors, trace minerals and protects cells from damage both physically and by binding toxins. Diluent/stabilizer for antisera, enzymes, and sensitive biopolymers in order to maintain particular properties.

Each lot is tested and found to be negative for antibodies to HIV-1, HIV-2, HCV, HTLV-1, HTLV-2 and HBsAg, for syphilitic serology and for HIV-1 and HCV RNA .

Annexins are a family of calcium-dependent phospholipid-binding proteins, which bind to phosphatidylserine (PS). Externalization of phosphatidylserine residues in the outer plasma membrane of apoptotic cells allows detection via Annexin V. Once the apoptotic cells are bound with labelled Annexin V, they can be visualized with fluorescent microscopy or cytometry.

Since loss of membrane integrity is a pathognomonic feature of necrotic cell death, necrotic cells will stain with specific membrane-impermeant nucleic acid dyes such as propidium iodide. The membrane integrity of apoptotic cells can be demonstrated by the exclusion of these dyes.

Purified inhibitor of trypsin, chymotrypsin, plasmin and especially kallikrein.  
For *in vitro* inhibition of fibrinolytic activity in blood samples (1).

**Unit definition:** 1 IU (inhibitor unit) inhibits 1 U trypsin as defined by cleavage of 1 µmol BAEE (N-benzoyl-L-arginine ethyl ester) per minute (see under trypsin, cat.no. 37291).

**Activity in other units:** min. 3 Ph. Eur. Units (PEU)/mg, based on dried substance.

**Unit definition:** 1 Ph. Eur. Unit of aprotinin inhibits 50 % of the enzymatic activity of 2 microkatal trypsin, measured with BAEE as substrate at pH 8.0 and 25 °C.

**Activity in other units:** min. 5850 Kallikrein Inactivator Units (KIU)/mg, based on dried substance. (KIU = PEU x 60 x 32.5).

### ■ AquaSpark™ Alkaline Phosphatase Substrate

2 mM in DMSO

M, 474.38

HS 38220000

Storage temperature +2 °C to +8 °C

AquaSpark™ Alkaline Phosphatase Substrate is an optimized, cost-effective chemiluminescent substrate for alkaline phosphatase detection in ELISA and Western and Southern Blots.

AquaSpark™ substrates offer unique advantages over the existing products as they can work as single agents without the need for enhancers, they have a higher efficiency and sensitivity over currently existing probes. Very high light levels are reached immediately after activation by phosphatase enzyme and a green light emission persists for 30 min or even hours.

AquaSpark™ Alkaline Phosphatase Substrate shows significantly higher signal intensities and very low background compared to other luminogenic alkaline phosphatase substrates.

100 µl will give 20 ml working solution.

Patent pending.

- ◆ No expensive additional enhancer necessary
- ◆ Use of significantly less substrate (1/5 or less)
- ◆ Strongest signal on the market
- ◆ Best signal-to-noise ratio – for highest sensitivity
- ◆ Long lasting signal on highest niveau

**AquaSpark™ Broad Range Phosphatase Substrate**

2 mM in DMSO  
 M<sub>r</sub> 592.13  
 HS 38220000  
 Storage temperature +2 °C to +8 °C

AquaSpark™ Broad Range Phosphatase Substrate is a chemiluminescent substrate for a variety of phosphatase enzymes including bacterial phosphatases and (calf intestine) alkaline phosphatase commonly used in immunoassays.

AquaSpark™ substrates offer unique advantages over the existing products as they can work as single agents without the need for enhancers, they have a higher efficiency and sensitivity over currently existing probes, they are especially designed to work under physiological conditions and can be used ex-vivo and in-vivo. Very high light levels are reached immediately after activation by phosphatase enzyme and a green light emission persists for 30 min or even hours.

AquaSpark™ Broad Range Phosphatase Substrate shows strong light emission and a very low background, making it the superior substrate for ELISA.

The substrate is suitable for sensitive detection of phosphatase-positive microorganisms such as *Staphylococcus aureus* and *Clostridium perfringens*. It can either be added directly to culture media before inoculation, facilitating online detection of luminescence development, or at the end of cultivation.

100 µl will give 20 ml working solution.

### ■ BIO-5000 Plus VIS Gel Scanner

HS 90278017

The BIO-5000 Plus VIS Gel Scanner is a dual platform scanner specially designed for scanning of electrophoresis gels and blots by visual detection. It is equipped with energy-saving LEDs and an optical CCD whose resolution is up to 4,800 dpi. The range of the optical density is between 0.05 and 3.77 OD providing a smarter way to capture differences among each layer of scanned electrophoresis gels.

With a built-in auto-focus function, BIO-5000 Plus is capable of shifting the focal length to the best position automatically for images of top quality. By the design of the Emulsion Direct Image Technology (E.D.I.T.) and holders for electrophoresis gels, it is convenient to put your BIO-5000 Plus in operation and lowers the risk of mutual infection in experiments. Therefore, BIO-5000 Plus is the best choice of scanning electrophoresis gels.

- ◆ Leak-free holder for scanning wet electrophoresis gels in transmission mode
- ◆ Scanning of stained blot membranes in reflection mode
- ◆ Energy-saving LEDs as light source
- ◆ Short warm-up times
- ◆ CCD image sensor
- ◆ Resolution up to 4,800 dpi
- ◆ Dynamic range over approx. 3.7 O.D. units
- ◆ Auto-focus for highest image quality
- ◆ Easy-to-use scanning software
- ◆ Scanning area up to 216 mm x 254 mm
- ◆ IQ/OQ/PQ and FDA CFR Part 11 ready with LabImage Software

Zwitterionic buffering substance for a pH range of 5.8 – 7.2 (1). Bis-Tris is used in biochemistry and molecular biology and is a common component of many buffer systems for electrophoresis. Since it may form a complex with some common metals, such as Cu(II) and Pb(II), formation constants should be taken into account when using this buffer in a solution containing metal ions. Bis-Tris is a substitute for the highly toxic buffer cacodylate.

DANGER

H340-H350 ♦ HS 38220000

Storage temperature +2 °C to +8 °C

Blank PRECOTES™ were developed by SERVA to provide a versatile solution to perform isoelectric focusing (IEF) of any pH range. Blank PRECOTES™ are thin (0.3 mm) polyacrylamide gels cast onto GEL-FIX™ support film that contain only BisTris buffer pH 6.5. They are given the prefix »blank« to indicate that they are (almost) »empty« gels with a matrix that can be adapted to anything the user wants it to be.

Blank PRECOTES™ are equilibrated in the ampholyte mixture of choice prior to electrophoresis. Shelf-life of Blank PRECOTES™ is at least 12 months, either as blank gels (without ampholyte) or in the equilibrated form (with ampholyte, without urea).

PRECOTES is a registered trademark of SERVA.

**BlueBlock PF (10x) for Blotting and ELISA**

HS 38220000

Protein-free, polymer-based blocking reagent, delivered as a 10x concentrate.

To achieve a good signal-to-noise ratio in blotting, ELISA or other immuno assays, it is important to block nonspecific antibody binding sites on the transfer membrane. Protein based blocking solutions like skim milk or BSA solutions may not only block unspecific binding sites, but mask as well specific binding sites. With BlueBlock, the specific binding sites remain accessible while nonspecific reactions are suppressed, thus leading to an increase in signal intensity. It is suitable for colorimetric and chemiluminescence detection systems.

**BlueBlot Semi-Dry Blotter SD11**

HS 90272000

For fast and gentle electrotransfer of proteins in Western Blots.

The BlueBlot semi-dry blotter forms a homogeneous electrical field that guarantees fast and efficient transfer of proteins from gel to membrane.

As associated with semi-dry blotting compared to tank blotting less heat is generated for gentle protein transfer. It is fast and requires less buffer. By applying the Xpress Blotting Buffer (cat. no. 42661) semi-dry transfer of high and low molecular weight proteins is done fast and efficient within 15 minutes. Moreover, all common continuous and discontinuous buffer systems can be applied without any limitation.

Anode is made from platinum-covered steel net, cathode is made from a stainless steel plate. The spring-mounted anode allows blotting of thicker gels and gel stacks. To avoid air bubbles within the blotting system the cathode carries drill holes to transport gas generated by the electro-chemically blotting process from inside to outside. The electrodes are built into a stable acrylic housing that is resistant to 10 % ethanol and easy to clean. The long-lasting electrodes can be dismantled and cleaned separately.

The BlueBlot semi-dry blotter has a blotting area of 11 cm x 11 cm. The electrode sets BB-E11 (11 cm x 11 cm) and BB-E17 (17 cm x 17 cm) are obtainable separately and fit into the same base unit. With the 17 cm x 17 cm electrode set up to 8 mini gels can be blotted simultaneously.

- ◆ Platinum-covered steel net as anode
- ◆ Spring-mounted anode for blotting stacks
- ◆ Stainless steel plate as cathode
- ◆ Blotting area: 11 cm x 11 cm
- ◆ Deployable for thicker gels and blotting stacks

HS 90272000

The BluePower™ 300 BLOT Power Supply (300 V, 2 A, 300 W) is suited for applications requiring high current like tank blotting or semi-dry blotting of larger protein gels. It is also compatible with separation of nucleic acids. 4 x 2 outlets, programmable.

All SERVA BluePower™ power supplies are easy-to-use, safe and reliable. They are fully overload-protected including short-circuit of outputs: an automatic power-off function stops the voltage when ground leakage is detected.

- ◆ Automatic cross-over function with constant voltage, current and power
- ◆ Programmable power supplies (9 x 9 steps)
- ◆ Free data logging, transfer and remote control via USB
- ◆ Timer function (h/Vh)
- ◆ Voltage ramp mode

**BluePower™ 3000 HPE™ Power Supply**

HS 90272000

The BluePower™ 3000 HPE™ Power Supply (3000 V, 200 mA, 300 W) is designed for high voltage applications like isoelectric focusing, horizontal 2D electrophoresis. It comes with a special mode for low current applications such as IEF: the power supply can measure currents as low as 10 microAmps and keep its voltage constant at even 0 current. Other applications like SDS PAGE and submarine electrophoresis can be performed as well. 4 x 2 outlets, programmable.

All SERVA BluePower™ power supplies are easy-to-use, safe and reliable. They are fully overload-protected including short-circuit of outputs: an automatic power-off function stops the voltage when ground leakage is detected.

- ◆ Automatic cross-over function with constant voltage, current and power

**BluePower™ 600 PRiME™ Power Supply**

HS 90272000

The BluePower™ 600 PRiME™ Power Supply (600 V, 1000 mA, 300 W) is an allround instrument serving many applications, e.g. SDS PAGE, blotting and submarine electrophoresis. It is particularly advised for operation of up to four vertical slab gel units run at high voltage, also resulting in shorter running times and for blotting applications (tank blot, semi-dry blot). 4 x 2 outlets, programmable.

All SERVA BluePower™ power supplies are easy-to-use, safe and reliable. They are fully overload-protected including short-circuit of outputs: an automatic power-off function stops the voltage when ground leakage is detected.

- ◆ Automatic cross-over function with constant voltage, current and power

**BlueVertical™ PRiME™ Mini Slab Gel Unit**

HS 90272000

The BlueVertical™ PRiME™ is a dual mini tank system to operate one or two precast gels. It accommodates SERVAGel™ TG PRiME™, all other types of SERVAGel™ and all other commercially available precast gels with an outer cassette dimension of 10 x 10 x 0.7 cm. The fixture of the inner core unit has been re-engineered to provide four robust clamps (two on both sides) that fix two precast gel cassettes properly and tightly in their correct position. This ensures that the inner buffer chamber is leak-free separated from the outer buffer compartment.

Separation of proteins by SDS PAGE, native PAGE and IEF can be carried out as well as separation of nucleic acids. The outer buffer tank works as heat sink (passive cooling by buffer), sufficient for most applications mentioned above. You may run two SERVAGel™ TG PRiME™ simultaneously at 300 Volt. The run will be completed in about 35 minutes without warming up the buffer significantly. If additional cooling is required (e. g. for IEF applications), a magnetic stirrer can be applied to help circulation of buffer fluid.

The unit consists of an outer buffer tank and the inner core running unit. Mounting of precast gels does not require any tedious clamping but is a matter of seconds. The outer buffer tank is made from rugged transparent acrylic – watch your gel while running! A safety lid closes the top, giving the unit a very compact and robust design. Little bench space is required. The unit is, of course, in accordance with the European safety guidelines (CE mark). When quality becomes an issue – choose BlueVertical™ PRiME™.

BlueZol is a ready-to-use reagent for the isolation of total RNA from various biological materials such as animal and plant tissues, cell culture and bacterial cells.

Homogenisation or lysis of a biological sample in BlueZol leads to a separation into three phases: an aqueous upper phase, an organic lower phase and an interphase. The RNA remains in the aqueous phase and its purification is followed by precipitation in isopropyl alcohol. The highly effective RNase inhibitory property of BlueZol protects the integrity of the RNA during lysis and results in the isolation of high-quality RNA. The purified RNA is ideal for any downstream applications such as RT-PCR, *in vitro* translation, Northern Blotting, RNase protection assays or dot blot hybridization.

BlueZol can be used for the simultaneous isolation of RNA, DNA and protein from one sample. The DNA remains in the interphase and the proteins in the organic phase. After purification DNA can be used for PCR and Southern Blotting and the proteins for Western Blotting.

X-Gal is a well known histochemical substrate used to detect the β-galactosidase enzyme (1, 2, 3, 4, 9, 10). Identification of lac<sup>c</sup>-colonies (8). X-gal is used to distinguish recombinant plasmids from parental vectors in cloning experiments using vectors containing the lacZ or lacZ [DMvP1](-)peptide gene (2, 3, 5). Upon hydrolysis, X-Gal yields a localized, insoluble blue precipitate making it exceptionally useful in blotting, immunocytochemical, and ELISA assays. X-Gal has been used for the detection of coliforms (*E. coli*) in municipal water supplies (6) and food products (7). X-Gal is often used in conjunction with IPTG (Isopropyl-β-D-thiogalactopyranoside, cat. no. 26600) which binds and inhibits the lac repressor thus inducing β-galactosidase activity.

Catalase is used for the removal of peroxides, the generation of oxygen and, in coupled systems, for the determination of metabolites e.g. uric acid (1). A very stable preparation particularly suitable for immobilization.

**Unit definition:** 1 U catalyzes the cleavage of 1 μmole hydrogen peroxide per minute to water and oxygen at 25 °C, pH 7. The decrease in hydrogen peroxide concentration can be followed spectrophotometrically at 240 nm (1).

Ciprofloxacin HCl is a second generation fluoroquinolone antibiotic. Fluoroquinolone antibiotics target bacterial DNA gyrase, an enzyme which reduces DNA strain during replication. Because DNA gyrase is required during DNA replication, subsequent DNA synthesis and cell division is inhibited.

Ciprofloxacin is a broad spectrum antibiotic targeting a wide variety of gram positive and gram negative bacteria. Many mycoplasma strains, inclusive *A. laidlawii*, *M. orale*, *M. hyorhinis*, *M. fermentans*, and *M. arginine*, react sensitive to ciprofloxacin. Since these strains are responsible for most of the contaminations in cell culture, it can be used for removal of mycoplasma contamination. At the recommended concentration of ca. 1 µg/ml no cytotoxic effects occur.

Ciprofloxacin HCl is freely soluble at 35 mg/ml.

Colchicine inhibits microtubule polymerization by binding to tubulin, which disrupts spindle formation during mitosis. Since increased rate of mitosis is associated with cancer cell proliferation, blocking microtubule function with colchicine has been used as an approach to anti-cancer therapy. Its mitosis-inhibiting function is also utilized to perform karyotypes in genetic studies. Colchicine blocks chromosome segregation during meiosis. Therefore it is used to induce polyploidy (tetraploid) in plant cells.

### ■ CTAB DNA Extraction Buffer molecular biology grade

HS 38220000

Cetyltrimethylammonium-bromide (CTAB) is a non-ionic detergent, which forms insoluble complexes with nucleic acids if the sodium chloride concentration in the solution is around 0.5 M. Polysaccharides, phenolic components and other enzyme-inhibiting impurities from lysates of plant cells can be effectively removed with the CTAB lysis buffer (1). Contains 2 % CTAB, 20 mM EDTA·Na<sub>2</sub>·2H<sub>2</sub>O, 1.4 mM NaCl and 100 mM Tris, pH 8.

### ■ Cyanase™ Nuclease

HS 35079090

Storage temperature -15 °C to -25 °C \*

Supplied as solution in 50 mM Tris-HCl pH 8.0, 5 mM MgSO<sub>4</sub>, 50 % (v/v) glycerol.

Cyanase™ is a cloned highly active non-Serratia based non-specific endonuclease that degrades single and double stranded DNA and RNA in as little as 1 minute.

Because of its unique properties, Cyanase™ is effective for cell lysate clearance, protein and viral purification and nucleic acid removal from samples.

- ♦ Fastest nuclease on the market
- ♦ Broad pH range
- ♦ Active in higher salt concentrations
- ♦ Unaffected by lysozyme or detergent
- ♦ Unsurpassed stability, can be stored up to 1 year at room temperature with minimal loss of activity

Concentration 50 U/μl  
pH optimum pH 7.5 - 8.0  
Salt optimum 20 mM NaCl  
Temperature optimum 24 °C - 37 °C

**Unit definition:** One unit is the amount of enzyme that degrades 3 μg of full length λ DNA completely at 37 °C in 1 minute in 50 mM Tris-HCl pH 8.0, 6 mM MnSO<sub>4</sub>.

Storage Temperature: +15 °C to +30 °C

Demecolcine depolymerizes microtubules and limits microtubule formation. It inactivates spindle fiber mechanism during metaphase, systematically immobilizing chromosomes at the metaphase plate. Induces apoptosis by blocking mitosis in HeLa S3 cells. The mechanism of action is similar to that of colchicine, but with lower mammalian toxicity.

**Digital Imaging and Analysis System L-340**

HS 90275000

The Digital Imaging and Analysis System III from SERVA is a fast and convenient gel documentation system to master the daily tasks of documentation and 1D gel analysis. Solid hardware including a digital SLR camera and easy-to-grasp software are combined to provide an excellent tool to meet your needs. The camera is equipped with a UV-filter. UV-, blue- and white-light transilluminator or epi-white-light are optional. The 1D analysis software LabImage L-320 as basis of L-340 allows automatic lane detection, manual lane and band correction, calculation of MW, Rf, area, band volume, background reduction, creation of own MW or pl standards as well as multiple standards for one gel and has many different report and export functions. In addition L-340 includes grimace correction, Rf calibration and correction of multiple standards, can normalize not only single band but group of bands and has an additional export report to RFL and XLS. An additional module allows FDA 21 CFR Part 11 compliance.

Unique double-strand specific endonuclease, which can be easily inactivated by heat treatment. As it does not digest ssDNA or RNA, it allows to specifically remove dsDNA in the presence of other nucleic acids. The yielding product is oligonucleotides with 5'-phosphates and 3'-hydroxyl termini.

Recombinantly produced in *Pichia pastoris*, specific activity ca. 200 000 units/mg.

For the degradation of proteins and peptides.

Serine proteinase with broad substrate specificity. It preferentially cleaves peptide bonds at the carbonyl end of amino acid residues with small hydrophobic side chains, such as glycine, valine, leucine, isoleucine, and particularly alanine. This specificity explains its unique ability to digest native elastin, which is found in highest concentrations in the elastic fibers of connective tissues. Therefore elastase in combination with other enzymes like trypsin is frequently used to dissociate tissues which contain extensive intercellular fiber networks.

Elastase is also able to digest other proteins such as fibrin, hemoglobin, and casein, but not native collagen and keratin. In the presence of Tris, sodium sulfate or SDS enzyme activity is greatly stimulated.

**Unit definition:** One unit will hydrolyze one micromole of methoxy succinyl-alanine-alanine-proline-valine-p-nitroanilide per minute at 37 °C and pH 7.5.

(V8 protease)

3.4.21.19 ♦ CAS [66676-43-5]

HS 35079090

Storage temperature -15 °C to -25 °C

Due to its highly specific cleavage of peptides the serine protease Glu-C (S. aureus V8) is used to produce protein digests for peptide mapping applications or protein identification by peptide mass fingerprinting or MS/MS spectral matching.

The specificity of Glu-C is primarily determined by the buffer pH and composition. Using phosphate buffers (pH 7.8), Glu-C will cleave at both glutamyl and aspartyl bonds. Ammonium bicarbonate buffer (pH 7.8) will lead to a preferential cleavage of glutamyl bonds. The presence of proline residues on the carboxy side of the peptide bond inhibits the cleavage.

### Excellent Gel Kit 7.5 % for 1D SDS PAGE

HS 38220000

Storage temperature +2 °C to +8 °C

The ready-to-use precast horizontal Excellent gels are the ideal tool to run high resolution horizontal SDS PAGE. Up to 25 samples can be run in one gel, sample volume is 15 µl. The thin gel layer and running conditions at temperature-controlled 15 °C enable high resolution of protein bands, fast staining/destaining and much easier handling compared to vertical PAGE. Due to the horizontal method, low buffer consumption is an extra plus in comparison with operating a vertical system. The standard support film is recommended for Coomassie® or silver staining. For fluorescence detection of proteins, gels cast on a non-fluorescence support film are available. The Excellent Gel Kits are the ideal alternative for ExcelGel™ for SDS PAGE from GE. The gels have been developed in Heidelberg in close co-operation with researchers formerly using GE's ExcelGels™ ensuring comparable results.

Contains: 4 film-backed precast 7.5 % T SDS PAGE gels with a Tris/acetate buffer system (size: 260 x 125 x 0.43 mm, 25 slots for 15 µl) and a SDS PAGE buffer kit. For run in horizontal flatbed chambers like HPE™ BlueTower, HPE™ BlueHorizon and Multiphor II™.

**20 ml FliQ Column**

HS 38220000

Empty 20 ml FPLC chromatography column. Both ends of the FliQ columns have 10.32 UNF threads which fit all common chromatography instruments. Pack your own resin into these columns. Separate your proteins using an FPLC, HPLC, low pressure pump or a syringe. Use your own resins or use our own high capacity, high flow rate resins e.g. Protein A Agarose, Protein G Agarose, Ni-Superflow, Resin.

**Specifications**

Bead volume: 20 ml resin  
 Simple packing procedure  
 Universal 10.32 UNF threads  
 Compatible with FPLC & HPLC  
 Flow rate: 0.5 to 2 ml/min  
 Stability: pH 2 - 14  
 Max. pressure: 42 psi (3 bar)  
 10.32 packing connector sold separately (cat. no. 42282.01)

**Fluorescence Gel Imager**

HS 90278017

Bio-1000F is an innovative, user-friendly and cost-effective fluorescence gel imager that integrates image capture, gel preview, and gel extraction essential for routine nucleic acid and protein gel electrophoresis. With the combination of high-sensitivity CCD system and Blue-LED illuminators, Bio-1000F is compatible with all EtBr-alternative fluorescent stain and provides the publication-quality image up to 0.04 ng per band, significantly enhancing the fluorescent signal expression over other gel documentation systems dependent on UV and Blue-LED light sources. Moreover the scanner allows to detect proteins pre-labelled with SERVA Lightning Red and other fluorescent dyes that are excited with blue light and emitting above 520 nm with a sensitivity of about 1 ng protein/band (for SERVA Lightning Red).

Incorporating removable filter plate and intuitive MiBioFluo software interface, users can visualize banding pattern and conduct gel extraction directly on Bio-1000F for more convenient operation without movement between trans-illuminator and gel imager. The compact design especially enables Bio-1000F to fit in crowded laboratory space. Bio-1000F features an integrated, environmental friendly, and ultra-sensitive gel imager for researchers, dedicated to improve the laboratory safety and gel electrophoresis process efficiency.

**Fluorobind Membrane, surface PVDF**

Pore size 0.2 µm, format: 25 cm x 3 m

HS 39219090

Fluorobind membranes are based on PVDF-type chemistry and show an excellent protein binding capacity. They are not only suitable for all standard applications in protein analysis, but as well for special applications like fluorescence detection and protein sequencing. The pore size of 0.2 µm is ideal for blotting of proteins of lower molecular weight and peptides, but can as well be used for larger proteins. The membranes feature a high sensitivity with low background in all common detection systems. The high mechanical stability facilitates handling and allows multiple stripping of the membrane and harsh washing conditions.

HS 38220000

Storage temperature -15 °C to -25 °C

Stock solution, for cell culture, biochemistry and molecular biology. Formulated to contain 50 mg/ml G 418 base in deionized water. 50 mg G 418 base are approx. 70 mg G 418 sulfate (based on dry weight). The working concentration has to be established for every cell type. Bacteria and algae require 5 µg/ml or less while animal cells may require 300 - 500 µg/ml.

G 418 is an aminoglycoside antibiotic from *Micromonospora rhodorangea*. Used for the selection and maintenance of eukaryotic cells expressing the neomycin resistance gene (neo). G418 blocks polypeptide synthesis by inhibiting the elongation step. It is similar in structure to gentamycin B1 but active against both bacteria and eukaryotes.

Highly-purified polysaccharide produced by bacteria. Useful alternative to agar for the in vitro culture of many plants and in microbiological culture media.

High salt concentrations increase gelling temperature and polymerisation is enhanced in the presence of bivalent cations.

- ♦ Yields very clear gels
- ♦ Consistent quality from lot to lot
- ♦ Economical, because only about half the amount of agar is required
- ♦ Reduced gel preparation time
- ♦ Stable at high temperature and withstands repeated autoclaving

Formulated to contain 50 mg/ml gentamycin base in deionized water. 50 mg gentamycin base correspond to approx. 50 000 units of gentamycin and are approx. 80 mg gentamycin sulfate.

Gentamycin is an aminoglycoside antibiotic complex from *Micromonospora purpurea* and consists of closely related compounds: gentamycin C<sub>1</sub>, C<sub>1a</sub>, C<sub>2</sub>, C<sub>2a</sub> and C<sub>2b</sub>. Inhibits bacterial protein synthesis by binding to the ribosomal 30S subunit and causing misreading of mRNA (in a similar way as streptomycin).

Broad spectrum antibiotic which inhibits growth of many gram positive and gram negative bacteria including strains which are resistant to chloramphenicol, kanamycin or tetracycline. Frequently used in cell culture, often in combination with amphotericin B, nystatin or penicillin G.

Glucose oxidase is used in the enzymatic determination of D-glucose in solution. Glucose oxidase oxidizes β-D-glucose to D-gluconolactate and hydrogen peroxide. Horseradish peroxidase is then used as the coupling enzyme for glucose determination. Although glucose oxidase is specific for β-D-glucose, solutions of D-glucose can be quantified as α-D-glucose will mutarotate to β-D-glucose as the β-D-glucose is consumed by the enzymatic reaction.

**Unit definition:** 1 U catalyzes the oxidation of 1 μmole glucose to glucuronic acid per minute at 25 °C, pH 7 coupled with peroxidase and o-dianisidine (2).

L-Glutathione oxidized (GSSG) is the dimeric form of glutathione (GSH). In vivo GSSG is reduced by the NADPH-dependent enzyme glutathione reductase. The ratio of GSH to GSSG is often used to measure the level of oxidative stress in cells, with higher concentrations of GSSG implying more oxidative stress.

### ■ Gravity Blotter

HS 90272000

The SERVA Gravity Blotter has been developed by SERVA to blot film-based IEF and SDS PAGE gels at high efficiency. When performing horizontal gel electrophoresis the gel layer has to be stabilized by a backing, either by glass or plastic. This backing has to be removed before transferring the separated proteins onto a membrane by tank or semi-dry blotting. During this laborious process, the gel could get damaged. The use of the Gravity Blotter renders separating gel and film backing unnecessary. The results are comparable to tank or semi-dry transfer methods. The unit consists of a base plate with a transfer area of 14 x 29 cm. The pressure is provided by aluminum plates that are placed on top of the blotting stack. Transfer time is 4 h or overnight.

### ■ 1 ml HiFliQ Co-NTA FPLC Column

HS 38220000

Protein Ark HiFliQ columns pre-packed and ready to use with pre-charged Cobalt-NTA Agarose Resin for affinity purification of poly-histidine tagged recombinant proteins by immobilized metal ion affinity chromatography (IMAC).

Available in 1 ml and 5 ml HiFliQ column sizes with high binding capacity and minimal ion leakage. Compatible with all common chromatography HPLC and FPLC instruments, and low pressure pumps and syringes using an appropriate adaptor.

#### Specifications

Column volume: 1 ml resin  
 Column construction: Polypropylene  
 Resin: Super Co-NTA Agarose  
 Base matrix: 7.5 % cross-linked agarose  
 Co-NTA capacity: 40 - 50 mg (per 1 ml resin)  
 Flow rate: 1 ml/min  
 Max. pressure: 0.5 MPa (72 psi)

Protein Ark HiFliQ columns pre-packed and ready to use with Protein G Agarose FF resin for rapid antibody purification from serum, ascites and tissue culture supernatants. Available in 1 ml and 5 ml HiFliQ column sizes with high ligand density and high binding capacity. Compatible with all common chromatography HPLC and FPLC instruments (including ÄKTA™ FPLCs), and low pressure pumps and syringes using an appropriate adaptor.

**Specifications**

Column volume: 1 ml resin  
 Column construction: Polypropylene  
 Resin: Protein G Agarose FF  
 Base matrix: Agarose  
 Protein G capacity (hlgG): 20 mg (per 1 ml resin)  
 Flow rate: 1 ml/min  
 Max. pressure: 0.5 MPa (72 psi)  
 Universal 10.32 (1/16") UNF threads: Inlet Female/Outlet Male  
 Dimensions: 15 x 80 mm

■ HPE™ BlueHorizon™

HS 90272000

The HPE™ BlueHorizon™ is a flatbed system for horizontal electrophoresis using precast gels, self-cast gels and gel strips. Main applications are isoelectric focusing (IEF) including the run of IPG strips (like SERVA IPG BlueStrips) in 2D PAGE and SDS PAGE, but also the separation of nucleic acids in polyacrylamide gels.

The unit consists of a stable metal housing and an integrated drawer. The drawer holds the cooling plate with connectors for the external refrigeration system (e.g. the circulatory refrigerator bath HPE™ Cooling Unit, cat. no. HPE-CU1). The cooling plate is made from special ceramic material (maximum gel size 260 x 205 mm) for efficient cooling. It provides even heat dissipation, allowing to run gels at a temperature as low as 4 °C. This is particularly important when applying high voltage to thin isoelectric focusing (IEF) gels.

The electrode lid comes with one pair of platinum electrodes. Three fixed electrode positions allow the usage of a wide range of different sized gels. Optional, an electrode lid with a triple electrode arrangement for bi-directional gel run is available. The easy-to-clean housing allows placing the power supply on top of the unit saving valuable space on your bench.

- ◆ High capacity cooling plate suitable for high voltage applications like IEF etc.
- ◆ Fixed platinum electrode distances of 270 mm, 195 mm and 115 mm
- ◆ For all kinds of film-backed flatbed gels, self or precast
- ◆ Samples are easy to load
- ◆ Economical reagent usage (minimizing running buffer volume)
- ◆ Smart design - made in Germany

### ■ HPE™ BlueTower System

HS 90272000

The HPE™ BlueTower System allows electrophoretical separations in up to four horizontal gels at the same time. It is used for 1D and 2D electrophoresis gels, where multiple runs are an important demand. Structurally, the HPE™ BlueTower consists of four horizontal electrophoresis chambers, which are built as movable drawers into a metal housing. The HPE™ BlueTower and the HPE™ gels have been developed together as a system to achieve better results than with conventional SDS polyacrylamide gel electrophoresis (PAGE) technology. The precast HPE™ gels, which are less than 1 mm thin and film-backed, are protected from light during the run. No glass plates are used. They are placed on aluminum oxide ceramic cooling plates, which ensure very efficient heat dissipation and therefore straight electrophoretic migration in each gel.

**2D HPE™ Double BlotGel NF 12.5 % Kit**

Size: 250 x 110 x 0.65 mm

HS 38220000

Kit comprising 4 plastic-backed gels, including running and equilibration buffers, FS wicks and cooling contact fluid.

The gels can be easily blotted because the gels are non-covalently bound to the supporting film so that it can be removed from the gel after electrophoresis. This non-fluorescent (NF) supporting film also provides best results for fluorescent staining and labelling.

Suitable for running 2 x 11 cm IPG strips plus 1 marker lane by horizontal electrophoresis on HPE™ BlueTower, HPE™ BlueHorizon or Multiphor II™.

### ■ 2D HPE™ Mercator Gel 12.5 % Kit

HS 38220000

Storage temperature +2 °C to +8 °C

2D HPE™ Mercator Gels allow a much more precise XY-coordinates determination of protein spots in 2D gels.

2D gel analysis is mostly done by triangulation of the XY-coordinates of the protein spots of a 2D gel picture with an appropriate software. For comparison of the spot pattern of different gels, gels have to be normalized and the pictures are laid on top of each other. A major obstacle in comparing 2D protein gels are the technical gel-to-gel variations because of differences in sample preparation, gel casting and conduct of electrophoresis.

Simone König and her research group (IZKF, Münster, Germany) developed a method for generation of a reference grid, which improves the deviation of the correction of protein coordinates by an order of magnitude: comparative 2D fluorescence gel electrophoresis (CoFGE). The reference grid is formed by fluorescence-labelled marker proteins, which are applied to the gel in equal distances. After co-electrophoresis of protein marker and with a different fluorescent dye labelled protein sample, the XY-coordinates are much more precisely determined with the aid of the multiple triangulation points formed by the reference grid compared to standard methods. In cooperation with the research group of Simone König, SERVA developed the 2D HPE™ Mercator Gels for CoFGE on horizontal electrophoresis systems HPE™ BlueTower and HPE™ BlueHorizon™.

For easy loading of the fluorescence-labelled protein marker, the gels have in addition to the IPG slot 14 sample slots. The slots are on the cathode side in a distance of 3 mm to the IPG slot; the distance to each other is 18 mm. The kit contains 4 plastic-backed gels, including running and equilibration buffers, FS wicks and cooling contact fluid.

Glucosidase which cleaves endo-N-acetylhexosaminic bonds in hyaluronic acid and chondroitin sulfate A and C to tetrasaccharide residues. As hyaluronic acid and chondroitin sulfate are often found in connective tissues, Hyaluronidase is often used in conjunction with collagenase to dissociate the extracellular matrix between cells of animal tissue, in order to release viable cells for use in tissue culture.

It may also be used to clarify synovial fluids in order to make cell counts possible.

**Unit definition:** 1 U produces the same turbidity reduction in a mixture of hyaluronic acid and albumin as 1 I.U. (International Unit) of a standard hyaluronidase preparation (1).

Storage temperature +2 °C to +8 °C

Aminoglycoside antibiotic that inhibits growth of procaryotic microorganisms (bacteria), eukaryotic microorganisms (yeasts) and mammalian cells.

Inhibits protein synthesis at translocation step; causes misreading of mRNA. A gene from *E. coli* encoding resistance to hygromycin B can be isolated and cloned by recombinant DNA technology. It is useful for the identification or selection of recombinant clones in various cell types.

### IEF Sample Buffer (2x) sterile filtered

HS 38220000

Storage temperature +2 °C to +8 °C

SERVA IEF sample buffer is suited to all vertical and horizontal IEF applications and systems. The sample buffer is supplied as 2x concentrate. It is sterile filtered, beneficial to long shelf life and absence of contaminants. Simply mix the liquid sample 1:1 with the buffer or dissolve a solid sample in the buffer first and dilute with water 1:1. When performing IEF in the presence of urea mix the sample with the buffer and add solid urea or use concentrated urea solution.

The buffer contains 4 % SERVALYT™ 4 - 9 T, 30 % glycerol and 0.005 % phenol red.

### ■ LabImage 1D L-340 Gel Analysis

HS 90279050

LabImage 1D gel analysis (LabImage 1D) is a flexible solution with strong image analysis algorithms, applicable also for DNA or protein testing and western blotting techniques. Due to its workflow-based concept, this application has become a prime example of software usability. Based on the latest technology, this application works with both Mac and the latest Windows versions and requires no special user training.

LabImage 1D L-340 is the advanced version for standard 1D analysis of protein and nucleic acid gels. It allows import of common image types or import of images from scanner or camera, automatic lane and band detection, manual lane and band correction, calculation of MW, Rf, area, band volume, background reduction, creation of own MW or pI standard as well as multiple standards for one gel and has many different report and export functions.

Moreover it includes grimage correction, Rf calibration and correction of multiple standards, can normalize not only single band but group of bands and has an additional export report to RFT and XLS. An additional module allows FDA 21 CFR Part 11 compliance.

Mitogenic lectin purified from the jack bean, *C. ensiformis*, that selectively cross-links cell-surface glycoproteins and affects the initiation of cell agglutination, mitogenesis, and apoptosis. Concanavalin A (ConA) binds to D-glucose, D-mannose and sterically related sugars in glycoproteins, and glycolipids and has been used in affinity chromatography purifications of various glycoproteins and cellular structures (1).

It has potential anticancer effects due to mitogenic activity with lymphocytes and cancer cells (2). When administered, concanavalin A binds to glycoproteins of the cell membrane, inducing autophagy when it eventually enters the cell. Simultaneously, it triggers inflammation of tumorous cells, causing an immune response targeted against those cells. This simultaneous induction of immune response and autophagy makes it a potentially potent and novel cancer treatment. It is also used for studies of immune regulation across various cell types

Crystalline powder in hydrochloride form. Lysozyme hydrolyzes the  $\beta$  1 → 4 linkages of the murein between N-acetylmuramic acid and N-acetyl-D-glucosamin, and degrades the heteroglycan chain to disaccharides. This reaction leads to cell lysis in most gram positive bacteria. Lysis can be prevented if the reaction is performed in an isotonic sucrose medium. Under these assay conditions protoplasts are produced which no longer have a cell wall. In gram negative bacteria a compact lipopolysaccharide layer on the exposed murein sacculus efficiently shields them from lysozyme digestion. Only when the stabilizing  $Ca^{2+}$  ions are removed by treatment with e.g. EDTA, the murein becomes susceptible to lysozyme. Suitable for hydrolysis of bacterial cell walls and of proteoglycans (1, 2).

Lysyl Endopeptidase, originally isolated from the soil bacterium discovered by Masaki, et al. cleaves specifically the peptide bonds at the carboxy-terminal side of Lysine residues and S-aminoethylcysteine residues with a high degree of specificity, making it a valuable tool for protein sequence analysis and for proteome research. An added feature of Lysyl Endopeptidase is its ability to retain complete activity after incubation in 4M urea or in 0.1 % SDS solution for up to 6 hours at 30 °C.

■ Metal Chelate Midi Bulk Pack MC Plugs

HS 38220000

The Proteus IMAC kit is designed for simple, rapid His-tagged recombinant protein purification from a cell lysate under native or denaturing conditions. Proteus spin columns replace lengthy and expensive chromatographic methods such as FPLC. Metal chelate affinity chromatography is a rapid one-step purification, which removes most contaminants and can achieve purities close to homogeneity.

**Contents:**

Quantity: 24 x 1.6 ml Ni-IMAC columns  
Max. sample volume per load: 20 ml, swing bucket rotor  
Collection tube: 50 ml centrifuge tubes  
Min. number of purifications: 48 purifications (2 uses per column)  
Typical capacity/preparation: 10 - 15 mg 6 x His-tagged protein

### MP 310 Power Supply

HS 90272000

The Major Science MP 310 power supply is a microprocessor-controlled power supply with full control range of designated current and/or voltage. Its maximum voltage output is 300 V. MP 310 is designed to meet most electrophoresis needs in a personal, single, easy to use unit. It is capable of running horizontal and vertical electrophoresis (like 2D electrophoresis, SDS PAGE applications). In addition, a timer with alarm function is also equipped in the unit, and so is pause function. Furthermore, the powerful specifications plus four terminator pairs can be used to run four units in parallel. The compact design of stackability is another feature to save benchtop space.

- ◆ Advanced power capacity: 300 V, 700 mA, 150 W
- ◆ Wide applications for DNA, RNA, and protein electrophoresis
- ◆ Microprocessor controlled
- ◆ Constant voltage or constant current
- ◆ Four pairs of outlet terminator
- ◆ Timer with alarm function
- ◆ Advanced safety devices
- ◆ Stackability
- ◆ Compact size

### MP 320 Power Supply

HS 90272000

In addition to running standard horizontal agarose and vertical polyacrylamide gels, the MP 320 power supply easily handles all your blotting applications. Its microprocessor control offers constant voltage, constant current or constant power and pause/resume run capability during timed or continuous operation. MP 320 is fully programmable, offering up to 6 multi-step settings and saving up to 30 programs, and capable of running 4 cells simultaneously. Its design provides a compact and modern stackable case, and a 2.6" LCD screen, which displays all the running / setting conditions. Safety devices include no load detection, leakage detection, sudden load change, over temperature protection, and over load detection.

- ◆ 300 V maximum voltage
- ◆ 3000 mA maximum current
- ◆ 300 W maximum power
- ◆ Four pairs of outlet terminals
- ◆ Timer with alarm function
- ◆ Constant voltage or constant current operation
- ◆ Advanced safety device design
- ◆ Compact size
- ◆ Stackable case
- ◆ Wide applications for DNA, RNA and protein electrophoresis

■ **MP 510 Power Supply**

HS 90272000

The MP 510 power supply is a microprocessor controlled power supply that covers the broadest range of applications. It offers constant voltage, constant current or constant power. Pause/resume run capability during timed or continuous operation is allowed. MP 510 is a fully programmable model, offering up to 6 multi-step settings and saving up to 30 programs, and capable for running 4 electrophoresis systems simultaneously. Its design provides a compact and modern stackable case, and a 2.6" LCD screen, showing all the running / setting conditions. Safety devices include no load detection, leakage detection, sudden load change detection, over temperature protection, and over load detection.

- ◆ 500 V maximum voltage
- ◆ 800 mA maximum current
- ◆ 300 W maximum power
- ◆ Four pairs of outlet terminals
- ◆ Timer with alarm function
- ◆ Advanced safety device design
- ◆ Compact size
- ◆ Stackable case

Highly effective disinfectant, particularly active against mycoplasma, but also against bacteria, virus and fungus.

One of the sources of mycoplasma contamination is the formation of aerosols that can occur during handling of infected cells. Cell culture labs should therefore thoroughly disinfect all surfaces of the laboratories and equipment, including benches, incubators, storage boxes of cells, liquid nitrogen containers.

MycoDecon is an alcohol based, non-corrosive and non-carcinogenic solution which can be easily sprayed on all surfaces without leaving any traces.

Supplied in a spray bottle (250 ml) or as refill (500 ml).

**Ni-Extrachel Agarose Resin**

HS 38220000

Storage temperature +2 °C to +8 °C

The resin has a polychelator ligand covalently coupled to a highly crosslinked agarose resin and is loaded with nickel ions.

Ni-Extrachel Agarose Resin works in presence of EDTA, DTT and other chemicals, which result in stripping of the metal ions with standard Ni-NTA or -IDA resins.

Its specificity and stability allows a one-step purification without the need of pretreatment of samples for removal of nickel stripping agents.

Suitable for batch, gravity and high pressure column purification.

**Ni<sup>2+</sup>-IDA-Metal Chelate Sepharose Resin**

HS 38220000

Ni<sup>2+</sup>-IDA Metal Chelate Agarose Resin designed for affinity purification of polyhistidine tagged proteins. Nickel ions are carefully loaded onto an agarose matrix via an iminodiacetic acid (IDA) coupled ligand to obtain a stable affinity matrix with a high binding capacity for histidine residues (up to 10 mg/ml determined from *E. coli* cleared lysate). Other metal ions such as Co<sup>2+</sup>, Cu<sup>2+</sup>, and Zn<sup>2+</sup> can also be used resulting in different affinities. If required, the nickel ions can be removed from the agarose matrix using 5 wash steps with 100 mM EDTA, and the matrix recharged with a different metal ion.

**Specifications**

Specificity: Polyhistidine tag  
 Matrix: Agarose

Paraformaldehyde is a cross-linking fixative used in histology, light and electron microscopy and flow cytometry. It is changed to formaldehyde by heating and by adding small amount of sodium hydroxide. When the samples are to be used in fluorescence studies, paraformaldehyde is recommended as fixative. In histology it is generally preferred over other fixatives as the others result in more silver grains on the tissues.

For the degradation of proteins. Pepsin preferentially hydrolyzes those peptide linkages which involve the amino group contributed by the aromatic amino acids phenylalanine, tyrosine and tryptophan.

**Unit definition:** 1 milliAnson unit is equivalent to 1 μmole of Folin-positive amino acids calculated as tyrosine, released from denatured hemoglobin per minute at 37 °C, pH 2.0.

**Activity in other units:** ca. 0.015 PU<sup>hb</sup>/mg („Pepsin-Unit“ according to Anson (1, 2). Expressed in millimole tyrosine, therefore 1 PU<sup>hb</sup> = 1000 milliAnson units.)

PNGase F is a mutant recombinant glycosidase from *Flavobacterium meningosepticum* and expressed and purified from *E. coli*. The enzyme catalyzes the cleavage of N-linked oligosaccharides between the innermost GlcNAc and asparagine residues of high mannose, hybrid and complex oligosaccharides from N-linked glycoproteins.

The proprietary changes made to PNGase F have been shown to have unique characteristics when compared to other commercially-available sources of PNGase F:

- $\blacklozenge$  Does not need a denaturing step
- $\blacklozenge$  Works on native glycoproteins and serum glycoproteins in only minutes at room temperature
- $\blacklozenge$  Leads to a more complete glycan release compared to other commercially-available enzymes

Poly-L-lysine is a positively charged amino acid polymer with approximately one HBr per lysine residue, which makes it soluble in water.

The substance is a nonspecific attachment factor for cells. It promotes cell adhesion to solid substrates by enhancing electrostatic interaction between negatively charged ions of the cell membrane and positively charged ions on the culture surface.

For coating of a 25 cm $^2$  culture dish it is recommended to use 1.0 ml of a 0.1 mg/ml solution. Remove the solution after 5 minutes through aspiration and thoroughly rinse the surface. Let dry for two hours before introducing cells and medium.

Can also be used for coating of glass coverslips.

Mixture of at least 10 proteases: five serine type proteases, two zinc endopeptidases, two zinc leucine aminopeptidases and one zinc carboxypeptidase. Digestion with the product has been useful when extensive or complete degradation of protein is required. Pronase E is used in tissue dissociation of various tissues, e.g. to isolate living chondrocytes. Additional applications are the structural analysis of proteins (1, 2), preparation of bacteriophage lambda DNA (3), pretreatment of tissue sections to enhance the intensity of immunostaining and removal of protein in DNA/RNA isolations.

**Activity:** min. 5.0 DMC U/mg

**Unit definition:** 1 DMC-U (1U) is that amount of enzymatic activity which catalyzes the cleavage of 1 μ-equivalent peptide bond from dimethyl casein per minute at 25 °C, pH 7.5, expressed in terms of the appearance of new terminal amino groups (4).

**Activity in other units:** ca. 1 000 000 PU-units/g (casein substrate; 40 °C, pH 7.4 (5)), ca. 20 000 PUK-units/g (casein substrate, 40 °C, pH 7.5).

**Protein Molecular Weight Standards**

HS 38220000  
Storage temperature -15 °C to -25 °C

To determine the molecular weight of proteins separated in polyacrylamide gels in their native state SERVA offers a set of 8 proteins. Proteins are either in solution or lyophilized, the lyophilized proteins can easily be dissolved in water or sample buffer. The molecular weights of the proteins range from 12.300 Da (Cytochrome C) up to 450.000 Da (Ferritin horse).

**Please note: In the presence of SDS most of the proteins will fall into their subunits, therefore this marker should not be used for SDS PAGE.**

25 mg of each. For native electrophoresis.  
 Ferritin horse M<sub>r</sub> 450 000  
 Catalase bovine M<sub>r</sub> 240 000  
 Aldolase rabbit M<sub>r</sub> 160 000

Serine protease with very broad range of action: cleaves peptide bonds at the carboxylic side of aliphatic, aromatic, and hydrophobic amino acids.

Suitable for the isolation of DNA and RNA (1, 3).

**Unit definition:** 1 mAnson unit is defined as the amount of enzyme that liberates folin-positive amino acids and peptides, corresponding to 1  $\mu$ mol tyrosine per minute at 37 °C and pH 7.4 using urea-denatured hemoglobin as substrate (4).

**Activity (U/ml):**  $\geq 600$

**Inhibitors for proteinase:** AEBSF (cat. no. 12745), (PEFABLOC® SC (cat. no. 31682), PMSF (cat. no. 32395) and diisopropylfluorophosphate.

**Extraneous activities:** DNases and RNases not detectable.

Subtilisin-related serine protease with a very high specific activity and a broad spectrum of action. It is widely used for digestion of proteins, including DNases and RNases during nucleic acid preparations without compromising the integrity of the isolated DNA or RNA.

An extra purification step results in 2.5-fold increased solubility, increased specific activity and very low DNA content compared to other commercially available recombinant proteinase K preparations. Therefore it is especially suitable for methods demanding highest quality like Next Generation Sequencing (NGS).

### Proteus 1-Step Batch Midi Plus Spin Columns

HS 38220000

Proteus 1-Step Batch Midi Plus Spin Columns are designed for small scale protein purifications such as those required for expression trials, solubility determination tests, screening, titrating and scouting studies.

These innovative columns incorporate a SelfSeal™ membrane technology which retains the resin and sample in the batch incubation chamber. When the column is spun in a benchtop centrifuge at 750 g, the pores of the membrane dilate and the filtered eluate is collected in the bottom of the centrifuge tube.

**Specifications**

Sinter type: ultra high density polyethylene

Construction: Polypropylene

Pore size: 0.1 - 0.2  $\mu$ m low protein binding PVDF

SelfSeal: Proprietary coating

Maximum vol: 20 ml

Typical g force: 750 g

Typical spin times: 5 min for up to 20 ml sample at 750 g

Storage: Store at RT (non-sterile)

Shelf-life: 24 months

**■ Proteus Detergent Anion Exchange Mini Spin Column Kit (20 pc)**

HS 38220000

Proteus Detergent Anion Exchange (DetEx) Mini Spin Columns designed for rapid and effective removal of free detergents micelles and complete detergent exchange. They are optimized for membrane proteins with pI <8 in complex with non-ionic or zwitterionic detergents. Simple and adaptable to your protein requiring only a microfuge for operation. Ideal for applications such as ELISA, IEF, MS and NMR which suffer from interference with excess detergents.

**Features:**

Weak Anion Exchanger for binding membrane proteins with pI <8  
 Complete detergent exchange/removal  
 Column bed volume: 0.2 ml  
 Max. sample loading volume: 0.4 ml  
 Typical protein binding capacity: 2 mg  
 Elution in a small volume (minimum volume 50 µl)

**Benefits:**

Universal appeal as most proteins have a pI between 4 - 8  
 Rapid removal and exchange of free detergent micelles in 10 min  
 Generate concentrated protein free of detergent micelles  
 Only requires a microfuge for use

**■ Proteus Mini Clarification Spin Column, 0.2 µm PVDF membrane**

HS 38220000

Proteus Mini Clarification Spin Columns are designed to remove microorganisms, particles and precipitates larger than 0.2 µm pore size from aqueous solutions. These are ideal for HPLC/FPLC sample preparation. The PVDF membrane provides high flow rates and throughput, low extractables and broad chemical compatibility. The membrane binds far less protein than nylon, cellulose or PES membranes. The columns fit all standard microfuges and allow you to process multiple samples in parallel.

**Specifications**

Membrane type: Hydrophilic PVDF  
 Plastic construction: Polypropylene  
 Pore size: 0.2 µm  
 Maximum sample volume: 0.65 ml  
 Hold-up volume: < 5 µl

**■ Proteus NoEndoµ (Micro) 100 Column Kit**

HS 38220000

Residual endotoxin contamination in advanced biotherapy products is an expensive and often difficult contaminant to control.

Many commercially available protocols are unable to remove endotoxins effectively and are based on non-affinity chromatography methods e.g. ion exchange chromatography, phase separation using Triton X-114 or require time consuming and expensive affinity steps. These costly resins are often supplied as loose resin or packed in slow gravity columns. The Proteus NoEndo™ spin column kits offer a standardised method for high grade clearance of endotoxin from recombinant proteins, antibodies and viral vectors. These agents are increasingly being designed for therapeutic applications, hence moving them forward efficiently through *in vivo* studies requires pure preparations of the samples.

NoEndo™ µ spin columns incorporate our proprietary and NASA-inspired SelfSeal™ membrane technology. The membrane is specially formulated to prevent any sample from leaking into the collection tube on an orbital mixer. In a centrifuge, the membrane pores dilate and the eluate, free of endotoxin, passes into the collection tube. The contact time is maximized to ensure maximum endotoxin depletion without losses of the target protein, antibody or domain antibody. Uniquely, there is also no dilution of the sample.

HS 38220000

Residual endotoxin contamination in advanced biotechnology products is an expensive and often difficult contaminant to control.

Many commercially available protocols are unable to remove endotoxins effectively and are based on non-affinity chromatography methods e.g. ion exchange chromatography, phase separation using Triton X-114 or require time consuming and expensive affinity steps. These costly resins are often supplied as loose resin or packed in slow gravity columns.

The Proteus NoEndo™ spin column kits offer a standardised method for high grade clearance of endotoxin from recombinant proteins, antibodies and viral vectors. These agents are increasingly being designed for therapeutic applications, hence moving them forward efficiently through *in vivo* studies requires pure preparations of the samples.

NoEndo™  $\mu$  spin columns incorporate our proprietary and NASA-inspired SelfSeal™ membrane technology. The membrane is specially formulated to prevent any sample from leaking into the collection tube on an orbital mixer. In a centrifuge, the membrane pores dilate and the eluate, free of endotoxin, passes into the collection tube. The contact time is maximized to ensure maximum endotoxin depletion without losses of the target protein, antibody or domain antibody. Uniquely, there is also no dilution of the sample.

**■ Proteus X-Spinner 2.5 TRIAL Columns, assorted MWCOs**

HS 38220000

The holy grail in ultrafiltration (UF) is to eliminate sample fouling and to enhance recovery and purity of target proteins during concentration or buffer exchange step. The 2.5 ml non-stick UF concentrator provides the highest possible protein recoveries. This is due to two factors: the low protein binding cellulose triacetate (CTA) membrane and critically, the design of the X-Spinner which ensures that ultrafiltration is in opposite direction to the centrifugal force. The contra design also ensures that the filter does not clog. This is the first centrifugal concentrator designed with membrane proteins as a key application.

Maximum sample volume is 2.5 ml, hold-up volume is 25 μl. Trial pack contains the following X-Spinner with MWCOs of: 2x 5 kDa, 3x 10 kDa, 2x 20 kDa, 3x 100 kDa, 2x 300 kDa.

HS 38220000

Storage temperature +2 °C to +8 °C

There are several benefits of our QC stain compared to other rapid and traditional Coomassie™ stains:

**Rapid:** 15 min non-toxic safe 1-step stain. No organic solvents and no phosphoric acid!

**Sensitive:** 50 x more sensitive than other rapid stains. Lower limit is 5 ng protein standard.

**Linear range:** Very low background enabling accurate quantitation of proteins.

**High resolution:** Sharp protein bands that you would expect with traditional Coomassie™ staining. Also MS compatible!

**Durable:** Re-usable up to 3 times!

**Shelf life:** 1 year at room temperature. No precipitate forms over time, thus no shaking required!

**Recombinant Protein A Sepharose FF Resin**

HS 38220000

Protein A Sepharose® FF Resin designed for simple, one-step and rapid antibody purification from serum, ascites and tissue culture supernatant such as those derived from static cultures and bioreactors. Recombinant protein A has been coupled to Sepharose® to obtain a stable matrix with a high binding capacity for immunoglobulins via the heavy chain of the FC region (up to 30 mg/ml Human IgG). Antibody samples purified using this affinity resin may be used in a wide range of laboratory procedures such as 1D or 2D polyacrylamide gel electrophoresis, Western blotting, ELISA etc. Binding affinity varies depending upon the source species and subclass.

**Specifications**

Specificity: Protein A affinity antibodies  
 Matrix: Sepharose®  
 Coupled ligand: 3.5 mg Protein A/ml resin  
 Binding capacity (human IgG): 30 mg/ml  
 Bead size: 60 - 165 µm  
 Flow rate: 0.25 - 1 ml/min (recommended)  
 Maximum pressure: 120 - 140 psi  
 Buffer compatibility: Common aqueous buffers from pH 2.5 - 10  
 Binding buffer example: 1.5 M glycine/NaOH, 3 M NaCl pH 9.0  
 Elution buffer example (1): 0.1 M sodium citrate pH 5.5  
 Elution buffer example (2): 0.2 M glycine/HCl pH 2.5  
 Neutralization buffer example: 1 M Tris/HCl pH 9.0  
 Shipping/delivery: 50 % (v/v) resin suspension in 0.01 % thimerosal  
 Storage: 0.01 % thimerosal at 2 - 8 °C for up to 2 years from manufacture

**Rehydration Tray for IPG Strips**

HS 90272000

To rehydrate up to 12 IPG strips in lengths up to 24 cm. The rehydration tray is form stable and resistant against chemicals normally used when rehydrating IPG strips. The binding capacity to proteins is very low. The lid protects the IPG strips during rehydration against contamination. After usage the tray can easily be cleaned using a mild washing-up liquid and rinsed with distilled water.

Resazurin is a blue non-fluorescent dye used as a redox indicator in cell viability and proliferation assays for bacteria, yeast or mammalian cells. In viable cells the blue form of the dye is irreversibly reduced by enzymes to the highly red-fluorescent product resorufin (excitation: 530 - 540 nm; emission: 585 - 595 nm), which can be detected by flow cytometry, fluorescence microscopy, and high-throughput screening methods. Resazurin is minimally toxic to living cells, making it suitable for use in long-term cell culture.

**Resazurin Cell Viability Assay**

HS 38220000

Storage temperature -15 °C to -25 °C

The Resazurin Cell Viability Assay is a fluorescent assay that detects the cellular metabolic activities. The kit offers a simple, rapid, reliable, sensitive, safe, and cost-effective measurement of cell viability. Resazurin is a blue non-fluorescent dye until it is irreversibly reduced to the pink colored, highly red fluorescent resorufin by dehydrogenase enzymes in metabolically active cells. The fluorescent signal is monitored using 530 - 560 nm excitation wavelength and 590 nm emission wavelength. The absorbance is monitored at 570 nm and 600 nm. The fluorescent or colorimetric signal generated is proportional to the number of living cells in the sample.

## RIPA Buffer

HS 38220000

Storage temperature +2 °C to +8 °C

RIPA buffer is a very effective buffer for lysis of cultured mammalian cells. It enables protein extraction from cytoplasmic, membrane and nuclear proteins. The buffer is compatible with many applications like protein purification, protein assays, Western blotting, reporter assays etc. However, it will disrupt protein-protein interactions and may therefore disturb applications like immunoprecipitation and pull-down assays.

Supplied as solution in 25 mM Tris-HCl pH 7.5, 5 mM MgCl<sub>2</sub>, 0.5 M NaCl, 0.01 % Triton® X-100, 50 % (v/v) glycerol.

Salt Active Nuclease is a highly active non-specific endonuclease from a marine bacterium that cleaves both DNA and RNA. It digests DNA versus RNA in a 10:1 ratio.

Salt Active Nuclease has optimum activity at 0.5 M NaCl, is active in the pH range of 7 to 10 and low temperatures, which makes the enzyme ideal for use in removal of nucleic acids from cell extracts and proteins samples. It will remove contaminating nucleic acids in a traditional protein buffer system. That guarantees the full protection of proteins while the nucleic acids are fully removed.

- ♦ Non-specific endonuclease
- ♦ Optimum activity at high salt concentration (0.5 M NaCl)
- ♦ Active at low temperatures (20 % at 6 °C)
- ♦ Broad pH range
- ♦ Easily inactivated by reducing agents

■ **1D SDS NetGel NF 12.5% 25S Kit** Size: 250 x 125 x 0.45 mm

HS 38220000

Kit for horizontal SDS polyacrylamide gel electrophoresis and subsequent semi-dry blotting.

Contains 4 film-backed, net-reinforced 12.5 % T precast SDS PAGE gels (size 250 x 125 x 0.45 mm, 25 slots for 15 µl) and a SDS PAGE buffer kit.

The gels are non-covalently bound to the carrier film so that it can be easily removed from the gel after electrophoresis for blotting. In addition, the gel matrix is mechanically stabilized by a reinforcing net structure (Net-Fix™) to avoid damage of the gel.

The backing film is non-fluorescent for 1 D DIGE samples and all other fluorescent applications. For the run on horizontal flatbed systems like HPE™ BlueTower, HPE™ BlueHorizon and Multiphor II™.

## ■ SERVA Bluemager

HS 90275000

The SERVA Bluemager is a compact gel documentation system with user-friendly features of easy operation and quick response when in WiFi environment under standalone condition. This imaging system consists of a scientific CCD camera, motor driven lens, RGB light illuminator. The five-fold filter changer is equipped with a 595 nm filter.

Fluorescent stains such as SERVA Lightning Red, SERVA Lightning Sci3 and Cy3 are detectable with the standard emission filter. In addition and by the use of additional filters (additional filters like 535 nm and 665 nm are available) SERVA Lightning Sci2, SERVA Lightning Sci5, Cy2, Cy5, Alexa 488, Alexa 546, Alexa 647, SYPRO Ruby, SYBR Green I/II, SYBR Safe, DNA Stain G, etc. excited by blue, red, and green lights can easily be observed and captured by Bluemager.

Followed the design concept of a single, independent workstation with a single all-in-one processor embedded inside, Bluemager does not require any extra desktop computer to operate the system on. The 8" built-in touch screen LCD panel that Bluemager possesses can directly handle the image data without difficulty. Moreover, the Bluemager's smart user interface and vivid icons can rapidly capture gel images with high accuracy. With the use of Bluemager, you will enjoy a worry-free experience in collecting the gel imaging data while conducting some advanced chemi-fluorescence related experiments in your research.

### Features:

- ◆ Wide applications for colorimetric and fluorescence detection
- ◆ Patent-registered light source design: effectively excite the dye on gel sample
- ◆ High sensitivity: detection limit may reach to 1 ng
- ◆ Highly efficient filter lens suitable for the emission wavelength excited from each light source
- ◆ Ready for DIGE, multiplex analysis
- ◆ Low energy consumption: Energy saving
- ◆ Cost efficient: affordable imager system that may process some advanced research experiments

### Applications:

The three light sources equipped in Bluemager are red, green, and blue LED lights. Thus, wide range of color fluorescence applications may be processed through light source excitations:

- ◆ Red light applications: SERVA Lightning Sci5, Alexa™ 647, Alexa™ 660, allophycocyanin, Cy5, TO-PRO™-3, etc....
- ◆ Green light applications: SERVA Lightning Sci3, Alexa™ 546, Alexa™ 555, Alexa™ 568, Cy3, Nile red, Rhodamine B, TRITC, etc....
- ◆ Blue light applications: : SERVA Lightning Sci2, Alexa™ 488, Cy2, SYBR Safe, SYBR Green, SYBR Gold, SYPRO Ruby, FITC, ethidium bromide, etc.

It is adjustable to 3 individual light intensities, the amber filter is hinge-free, magnetic positioned. A gel cutting knife as well as a cardboard hood for image capturing with a smartphone are included.

- ◆ Filter size 180 mm x 120 mm
- ◆ 5 minutes automatic power-off
- ◆ Stable metal housing
- ◆ Enhanced portability with PowerBank (optional)
- ◆ Dimensions and weight: 185 mm x 30 mm x 220 mm, 1.45 kg

## ■ SERVA BlueShake

HS 84798200

SERVA BlueShake is a next generation rocking table. A solid aluminum housing, top quality electronic components and mechanics that meet the highest demands make BlueShake a laboratory device that is also ideally equipped for continuous use in research and diagnostic laboratories. The device is characterized by a sturdy, durable construction: Built on an aluminum housing, it is equipped with robust, precisely running motors. The movement of the table can be controlled manually in all directions at a freely adjustable speed. For a gentle staining or immunoblotting process, the angle of inclination is 4°. The generously dimensioned touch screen is absolutely waterproof and, like the entire device, easy to clean. The built-in mechanism is maintenance-free.

The large touch screen allows easy and intuitive operation of the device. If necessary, adjust time, rocking direction and speed, start, done.

- ◆ 4° angle of inclination for gentle movement
- ◆ Large table surface for versatile use
- ◆ Timer function
- ◆ Direction of movement freely selectable (forward/ reverse - lateral - circular)
- ◆ Robust design - Made in Germany

**SERVA BlueStain**

HS 84798200

SERVA BlueStain automatically stains polyacrylamide gels. Accurate, reproducible, user-friendly. The system pumps the required liquids into the gel tray. Pumping out after the preset incubation time is fast and complete. Thanks to SERVA BlueStain you can stain gel around gel using the same protocol. This makes the device interesting for research, but especially for the diagnostic laboratory.

The SERVA BlueStain staining machine as an universal gel stainer is used in research and diagnostics where a high number of gels have to be stained and/or a reproducible method is essential. The device is suitable for the whole range of currently applied staining methods. The simple operation, the absolutely robust mechanics and the results achieved with the device make it an indispensable tool in your laboratory. Programs are pre-installed on delivery, e.g. silver staining.

To start the staining process, first connect the appropriate storage containers (e.g. water, fixing solution, dye solution, waste, etc.) to the respective tubes. Now you can start after selecting the staining program. Using a simple export function, you can save the actual steps performed at the end of the staining process and thus document the corresponding log. Due to flexible programming you can create your own logs or modify existing or pre-installed programs at any time. To do this, copy any program, make the desired changes and save the newly created program under its own name. You can also intervene in a program that is already running, i.e. cancel a step and go to the next step. This can be important, for example, in silver staining, in order to avoid overcoloring of the gel (silver mirror).

The device is characterized by a sturdy, long lasting construction: Built on an aluminum housing, equipped with robust, precisely running motors, sophisticated electronics and high-quality 10-valve pump technology. The device is equipped with a staining tray measuring 30 cm x 25 cm for large-format gels. Optional equipment for staining gels with smaller formats is available. The movement of the table can be controlled manually in all directions at a freely adjustable speed. For a gentle staining process, the angle of inclination of the table is 4°. The generously dimensioned touch screen is absolutely waterproof and, like the entire device, easy to clean. The built-in mechanism is maintenance-free. Replacement tubes are available as accessories.

- ◆ Suitable for all staining protocols
- ◆ Pre-installed standard programs
- ◆ Free modification/entry of further programs
- ◆ 4° angle of inclination for gentle movement
- ◆ Large gel tray (30 cm x 25 cm)
- ◆ Optionally adaptable for mini gels and other formats

SERVA Clear G Agarose Tablets are fast-solving tablets which already contain the optimal amount of the non-carcinogenic sensitive fluorescent dye DNA Stain Clear G.

Just add the running buffer of your choice, solve the agarose and your agarose gel is ready!

- ◆ For analytical and preparative DNA and RNA gel electrophoresis and blotting (100 bp - ≥30 kb)
- ◆ Fast-solving agarose for gels with high clarity and low background
- ◆ Optimized mixture for high resolution of sharp bands with high sensitivity
- ◆ No clumping because separately packed in blister pack

**SERVA Co-IDA HD Agarose Resin**

HS 38220000

High density cobalt-iminodiacetic acid (IDA) crosslinked agarose resin for low pressure affinity chromatography. The high amount of available cobalt chelate groups allows for high binding capacity. Cobalt chelates recognize two exposed vicinal histidine tags with excellent specificity, but lower affinity as nickel or zinc chelates. The Co-IDA agarose resin is therefore the optimal choice, if highly pure proteins are needed or difficult to separate proteins have to be purified. Suitable for batch or column purifications. Binding/loading capacity: 20 - 40 µmol Me<sup>2+</sup>/ml gel.

### ■ SERVA DNA Stain G

WARNING  
H315-H319 ♦ HS 38220000

SERVA DNA Stain G is a safer alternative to traditional ethidium bromide stain for detecting nucleic acids in agarose gels. It is at least as sensitive as ethidium bromide and can be used in exactly the same way in agarose gel electrophoresis. SERVA DNA Stain G can be added to the gel solution, working dilution is 1:20,000 to 1:50,000.

SERVA DNA Stain G emits green fluorescence when bound to DNA or RNA. It has one fluorescence excitation maximum at ca. 300 nm and another at ca. 450 nm when bound to nucleic acid.

SERVA DNA Stain G is non-carcinogenic and according to the AMES test it causes significantly fewer mutations than ethidium bromide.

### ■ SERVA DNA Stain Clear G

WARNING  
H315-H319 ♦ HS 38220000

SERVA DNA Stain Clear G is a new, non-carcinogenic, much more sensitive and convenient version of our SERVA DNA Stain G. It can be used instead of highly carcinogenic ethidium bromide for detecting nucleic acids in agarose gels.

SERVA DNA Stain Clear G emits green fluorescence when bound to DNA or RNA. It has two secondary fluorescence excitation peaks (ca. 270 nm and 295 nm) and one strong excitation peak centered around 490 nm. The fluorescence emission is similar to EtBr at ca. 530 nm when bound to nucleic acid.

Pre-casting and post-staining protocols are applicable.  
1 ml of this stain is sufficient for 17 - 25 L of agarose gel.

### ■ SERVA DNA Standard 1 Kbp DNA Ladder, lyophilized

HS 38220000  
Storage temperature -15 °C to -25 °C

The SERVA DNA Standard 1 Kbp DNA Ladder contains 11 fragments ranging from 500 bp to 10000 bp:  
**500, 1000, 1500, 2000, 2500, 3000, 4000, 5000, 6000, 8000, 10000 bp.**

All fragments with EcoRI ends for easy 5'-end labelling. Ideal for the analysis of larger DNA fragments generated by enzymatic restriction of plasmid DNA or for fragments generated by PCR in combination with SERVA DNA Standard 100 bp Ladder (cat. no. 39311 or 39312). The larger sized fragments are represented in lower mass, resulting in a clear grouping of the bands. The separation distance is 70 mm in a 1.2 % agarose gel.

Only 0.5 - 0.7 µg per lane are needed; for at least 300 applications.

Instructions of use and 2 ml loading dye solution for resuspension of the lyophilized DNA fragments are included.

HS 38220000  
Storage temperature -15 °C to -25 °C

The SERVA DNA Standard 100 bp Ladder equimolar contains 11 fragments ranging from 100 bp to 1000 bp:  
**100, 150, 200, 300, 400, 500 (2x), 600, 700, 800, 900 and 1000 bp.**

Ideal for the analysis of DNA fragments generated from plasmid DNA or for PCR generated DNA fragments. For optimal results use 1.5 - 2 % agarose gels. A separation distance of 60 - 80 mm is recommended. All fragments with EcoRI ends for easy labelling, the 5'-end labeled DNA marker behaves like an equalized DNA marker.

For at least 50 applications. Instructions of use and 1 ml separate loading dye solution for resuspension of the lyophilized DNA fragments are included.

Cat.No.	Size

### ■ SERVA DNA Standard 100 bp Ladder Extended, lyophilized

HS 38220000  
Storage temperature -15 °C to -25 °C

The SERVA DNA Standard 100 bp Ladder extended contains 17 fragments ranging from 100 bp to 5000 bp:  
**100, 150, 200, 300, 400, 500 (2x), 600, 700, 800, 900, 1000, 1500, 2000, 2500, 3000, 4000 and 5000 bp.**

Ideal for the analysis of DNA fragments generated from plasmid DNA or for PCR generated larger DNA fragments. For optimal results use 1.0 - 2.0 % agarose gels. A separation distance of 60 - 80 mm is recommended. All fragments with EcoRI ends for easy 5'-end labelling.

For at least 50 applications. Instructions of use and 1 ml separate loading dye solution for resuspension of the lyophilized DNA fragments are included.

### ■ SERVA Dual Color Protein Standard III

HS 38220000  
Storage temperature -15 °C to -25 °C \*

SERVA Dual Color Protein Standard III is a dual color prestained size marker. It is a mixture of 10 recombinant prestained polypeptides with molecular weights ranging from 7 kDa to 240 kDa.

SERVA Dual Color Protein Standard III is ready-to-use without the need of reconstitution or further dilution. A blue and orange chromophore is covalently bound to proteins, and the 10 prestained proteins are visible during electrophoresis or on a membrane after Western Blotting.

The 25 kDa and 70 kDa proteins labelled with an orange chromophore are easily identified and serve as a landmark. Recommended loading volume for a mini gel is 5 - 10 µl/lane.

Cat.No.	Size
39252.01	500 µl

**SERVA FastLoad 50 bp DNA Ladder**

HS 38220000  
Storage temperature -15 °C to -25 °C

Ready-to-Use DNA standard for agarose gel electrophoresis containing 17 fragments from 50 – 1500 base pairs. The 200 bp and 500 bp bands have increased intensity and serve as reference points. For estimation of DNA mass of bands of similar size with comparable intensity, the approximate mass of each band is indicated (0.56 µg/load). Recommended load is 5 µl/well. Contains Orange G as tracking dye. Stable for 12 months at 4 °C. For long term storage store at -20 °C.

Cat.No.	Size
39315.01	500 µl

**SERVA FastLoad 100 bp DNA Ladder**

HS 38220000  
Storage temperature -15 °C to -25 °C

Ready-to-Use DNA standard for agarose gel electrophoresis containing 12 fragments from 100 – 3000 base pairs. The 500 bp and 1500 bp bands have increased intensity and serve as reference points. For estimation of DNA mass of bands of similar size with comparable intensity, the approximate mass of each band is indicated (0.54 µg/load). Recommended load is 5 µl/well. Contains Orange G and Xylene Cyanol as tracking dye. Stable for 6 months at 25 °C and for 12 months at 4 °C. For long term storage store at -20 °C.

Cat.No.	Size
39316.01	500 µl

**SERVA FastLoad 1 kb DNA Ladder**

HS 38220000  
Storage temperature -15 °C to -25 °C

Ready-to-Use DNA standard for agarose gel electrophoresis containing 14 fragments from 250 – 25000 base pairs. The 1000 bp and 3000 bp bands have increased intensity and serve as reference points. For estimation of DNA mass of bands of similar size with comparable intensity, the approximate mass of each band is indicated (0.52 µg/load). Recommended load is 5 µl/well. Contains Orange G and Xylene Cyanol as tracking dye. Stable for 6 months at 25 °C and for 12 months at 4 °C. For long term storage store at -20 °C.

Cat.No.	Size
39317.01	500 µl

**SERVA HiSens Stain G**

HS 38220000  
Storage temperature +2 °C to +8 °C

SERVA HiSens Stain G is a highly sensitive, non-carcinogenic, non-toxic fluorescent nucleic acid stain, specially designed for in-gel staining of agarose gels. It stains double-stranded or single-stranded DNA and RNA with a sensitivity several times greater than EtBr. The detection limit in in-gel staining is around 0.1 ng of a 4-kb dsDNA band.

The stain can be detected with standard UV as well as with blue light tables. When bound to nucleic acids, the stain has fluorescent excitation maxima of 250 and 480 nm, and an emission maximum of 509 nm.

The stain is provided as a ready-to-use 10 000x stock solution.

**SERVA HPE™ Coomassie® Staining Kit**

HS 38220000

Colloidal staining kit for highly sensitive staining of 1D and 2D gels after electrophoresis. The kit contains two components to be mixed together prior to use. Kit contains enough reagents to stain 4 large 2D HPE™ gels. Reagents are MS compatible for downstream mass spectrometry analysis.

Coomassie = registered trademark of ICI Ltd.

**SERVA HPE™ IPG Overlay**

HS 27101985

Overlay oil to cover IPG strips during high voltage isoelectric focusing of proteins with no influence on separation behaviour of the IPG strip. Usage of the SERVA IPG Overlay is an important factor for sharp protein spots in high resolution 2D gel electrophoresis. For easy application of the oil a separate dropping bottle is included.

Cat.No.	Size

**SERVA HPE™ IPG Strip Buffer**

HS 38220000  
Storage temperature +2 °C to +8 °C

1 ml 40 % (w/v) SERVALYT™ mixture (pH 3-10) for IPG strip rehydration and sample preparation for 2D electrophoresis. SERVA IPG strip buffer works for all IPG strips pH gradients. Due to the low molecular weights of the SERVALYT™ buffer molecules there is no background staining in the 2D gels.

Cat.No.	Size
43368.01	1 ml

**SERVA HPE™ Lightning Red**

(Fluorescence labelling)  
HS 38220000  
Storage temperature +2 °C to +8 °C

SERVA HPE™ Lightning Red is a fluorescent dye for rapid labelling of proteins prior to 2D PAGE, making any staining and washing steps after electrophoresis unnecessary. In addition the dye is fully compatible with mass spectrometry and other downstream methods like Western Blotting. The labelling procedure is simple and quick: Typically use 80 pmol SERVA HPE™ Lightning Red for labelling of 1 µg protein. Incubate at 0 °C for 15 min. The labelled protein solution is directly applied to an IPG strip via cup- or rehydration loading. After the 2D run, detection of labelled proteins is performed by fluorescent imager (camera or scanner) at an excitation wavelength of about 530 nm and emission filter of 610 nm with a narrow band width of 30 nm. SERVA HPE™ Lightning Red is compatible with all additives typically used for sample solubilization and protein extraction, including carrier ampholytes and reductants. Alkalescent conditions are sufficient, it is not required to titrate the pH to a defined value.

- ◆ Direct detection
- ◆ No staining and washing steps after the run
- ◆ Very high sensitivity, < 100 pg protein / spot
- ◆ Wide dynamic and linear range of > 10<sup>4</sup>
- ◆ No over-staining effects
- ◆ Fully MS and Western Blotting compatible

The kit contains 250 µg SERVA HPE™ Lightning Red dye and DMSO.

### ■ SERVA IPG BlueStrip 3-10 / 7 cm

(IPG Strips)

HS 38220000

Storage temperature -15 °C to -25 °C \*\*

SERVA IPG BlueStrips are dried gel strips with immobilized pH gradient used in high resolution 2D gel electrophoresis of proteins. The strips have to be rehydrated before use. The homogeneous polyacrylamide gel matrix is covalently bound to GEL-FIX™ to stabilize the gel. Additionally, a non-binding cover film (GEL-FIX™ for Covers) protects the gel from damage and contamination. Each gel strip has its own lot number printed on and, therefore, is suitable for documentation according to GMP/GLP.

Each package contains 12 gel strips (all derived from the same production lot). Other pH gradients and gel strip lengths are available upon request.

■ **SERVA Lightning Sci2 lyophilized**

HS 38220000  
Storage temperature -15 °C to -25 °C

SERVA Lightning Sci2 is a Cyanine2 NHS ester for minimal labelling and maximum detection of proteins prior to protein detection in 2D Fluorescence Difference Gel Electrophoresis (DIGE). Minimal labelling with SERVA Lightning Sci2, Sci3 and Sci5 allows for the precise comparison of protein expression in two or three samples. The dyes are charge- and size-matched enabling high efficient detection and high resolution of minor proteins on 2D gel electrophoresis. SERVA Lightning Sci2 is compatible with all imagers suitable for detection of Cy2®. Gels labelled with SERVA Lightning SciDyes are ready for subsequent mass spectrometry analysis. Each vial contains specified amount of NHS ester with a tolerance variation of 10 %.

### ■ SERVA Musketeer

HS 90275000

The **SERVA Musketeer** is an advanced gel documentation system with user-friendly features, easy operation and quick response. This imaging system consists of a scientific CCD camera, motor driven lens, and white backlight board. The chemiluminescence treatment such as ECL can easily be observed and captured by the SERVA Musketeer and the fluorescence stains such as SERVA Lightning Red, SERVA Lightning Sci3, Cy3, SYPRO Ruby, Alexa 546, Alexa 647, etc. excited by RGB

Followed the all in one design concept of a single workstation, the SERVA Musketeer works independently and does not require a separate computer to operate the system. A built-in touch screen LCD panel of the SERVA Musketeer can directly handle the entire imaging procedure without any difficulty. Moreover, the smart user-friendly interface and vivid icons on the SERVA Musketeer allows for capturing of the gel images quickly and easily. With SERVA Musketeer, you will experience a hassle free process of collecting the gel imaging data in your laboratory.

The instrument is IQ/OQ/PQ and FDA CFR Part 11 ready with LabImage software. SERVA Musketeer is equipped with red, green, and blue LED transilluminator and epi lights and the appropriate filters. Thus, wide range of fluorescence applications may be processed through light source excitations:

- ◆ Blue light applications: SERVA Lightning Red (1D, 2D), SERVA Purple, SERVA Lightning Sci2, Cy2, SERVA Fluo-R, SERVA DNA Stain Clear G, SYBR stains, SYPRO Ruby, FITC, ethidium bromide, etc.
- ◆ Green light applications: SERVA Lightning Sci3, Cy3, AlexaG 546, AlexaG 555, AlexaG 568, Nile red, Rhodamine B, TRITC, etc.
- ◆ Red light applications: SERVA Lightning Sci5, Cy5, AlexaG 647, AlexaG 660, allophycocyanin, TO-PROG-3, etc.

A UV and white light transilluminator as well as epi R/G/B/ and epi white light are installed.

**SERVA Ni-IDA HD Agarose Resin**

HS 38220000

High density nickel-iminodiacetic acid (IDA) crosslinked agarose resin for low pressure affinity chromatography. The high amount of available nickel chelate groups allows for high binding capacity. Nickel chelates recognize two exposed histidine tags with high specificity and very high affinity. Therefore a nickel charged matrix is recommended for most standard purifications. Suitable for batch or column purifications. Binding/loading capacity: 20 - 40 µmol Me<sup>2+</sup>/ml gel.

**SERVA Ni-NTA Agarose Resin**

(NTA-Agarose Resins)

HS 38220000  
Storage temperature +2 °C to +8 °C

High capacity nickel-nitrilotriacetic acid (NTA) crosslinked agarose resin for low pressure affinity chromatography. The four metal-binding sites on the chelate enable high-protein binding and minimal metal leaching. Ideal for purification under denaturing conditions. Handling is easy and identical to standard protocols of other manufacturers, therefore there is no need to change established protocols. Suitable for batch and column purification. Binding capacity: > 50 mg/ml gel.

**SERVA PRiME Lightning Red**

HS 38220000  
Storage temperature +2 °C to +8 °C

SERVA Lightning Red is a fluorescent dye for rapid labelling of proteins prior to SDS PAGE and/or Western Blotting, making any staining and washing steps after electrophoresis unnecessary. Normalization in Western Blots by using the total protein signal on the membrane as loading control can be easily done with the pre-labelled samples. In addition, the dye is fully compatible with mass spectrometry and other downstream methods. The labelling procedure is simple and quick: 2 - 5 min for qualitative and 30 min for quantitative analysis.

For separation of the labelled proteins a wide range of gel formats including precast gels in plastic cassettes like SERVAGE/ PRiME Vertical Mini Gels and film-backed gels can be used.

The labelling works with complex and purified samples in a protein concentration range between 1 µg/ml up to 20 mg/ml - no need for protein concentration measurement or purification and concentration steps before or after labelling.

After the run, detection of labelled proteins is performed by fluorescent imager (camera or scanner) at an excitation wavelength of about 530 nm and emission filter of 610 nm with a narrow band width of 30 nm. Depending on the used protocol sufficient for 250 - 1250 lanes - no matter what size of gel (mini, wide or large format) you use.

- ◆ Simple and fast pre-labelling of proteins for SDS PAGE and Western Blotting
- ◆ No need for protein concentration measurement or purification and concentration steps before or after labelling
- ◆ No staining and washing steps after the run
- ◆ Broad protein concentration range
- ◆ Very high sensitivity, very low background
- ◆ Wide dynamic and linear range
- ◆ Compatible with all common gel electrophoresis buffer systems and mass spectrometry

WGK 2L ◆ HS 28439090

SERVA ProteinStain Fluo-R is a highly sensitive fluorescent dye for detection of proteins in e. g. SDS PAGE, native PAGE or 2D gels. The dye does not interfere with immunodetection. Therefore you can stain your gel with SERVA ProteinStain Fluo-R and then proceed with Western Blotting receiving a copy of your gel on the membrane.

The dye can as well be used for pre-staining, just use it in the loading buffer instead of bromophenol blue or other dyes.

It is as sensitive as silver staining, but has superior staining properties, which makes it the first choice for proteomic research. The dye has a good linearity, high contrast and is compatible with MS/MS analysis. The staining can be as well combined with silver staining and DIGE.

The dye is easily soluble in water. Just dissolve 5 mg in 3 L water to receive a 1 µM staining solution. Or prepare a 20 mM stock solution by dissolving 5 mg in 150 µl water. The dye is best excited with blue light of wave length 473/488 nm. Excitation with laser light of wave length 532 nm is as well possible, but less sensitive.

### SERVA ProteinStain Fluo-Y solution, 100x

(Fluorescence staining)

HS 38220000

Storage temperature +2 °C to +8 °C \*

SERVA ProteinStain Fluo-Y is a fast and sensitive fluorescent protein stain for 1D or 2D SDS PAGE. The 100x stock solution is simply diluted with water to its working concentration. After binding of the dye to proteins, it emits a strong fluorescence of bright golden colour. The maximum emission wave length of protein-bound dye is near 570 nm. Gels stained with SERVA ProteinStain Fluo-Y may be directly visualized with a variety of different UV-based fluorescence imaging systems.

Gels are fixed with ethanol/acetic acid solution and then directly stained with SERVA ProteinStain Fluo-Y. The whole staining procedure is completed in as little as 30 min. A destaining step is usually not necessary. But for reduction of background, simply wash gels in water for 1 – 5 min.

The bound dye is easily removed from the protein by washing the gel with sufficient water. Thus the staining is compatible with subsequent mass spectrometric analysis. Stained gels may be stored in stain solution in the dark at 2 – 8 °C.

- ◆ Highly sensitive fluorescent protein stain over a wide dynamic range
- ◆ Two-step protocol, no destain
- ◆ Directly detected by UV imaging systems
- ◆ MS compatible

### SERVA Purple Protein Quantification Assay

HS 38220000

Storage temperature -15 °C to -25 °C

The assay bases on the eco-friendly fluorescent dye SERVA Purple. The dye reversibly binds to lysine, arginine, and histidine residues in proteins and peptides to yield an intensely red-fluorescent product ( $\lambda_{Ex}$  518 nm,  $\lambda_{Em}$  610 nm). The assay exhibits very low protein binding variation, leading to more accurate protein concentration values.

- ◆ Fast and simple - no heating and reduction steps, completed in 1 h
- ◆ Compatible with many detergents and reducing agents
- ◆ Accurate staining of glyco-, phospho-, hydrophobic proteins and peptides
- ◆ Single tube and 96- or 384-well-format for high-throughput
- ◆ Detection limit of 100 ng/ml for peptides and 40 ng/ml for proteins
- ◆ Linear quantification over 3 orders of magnitude
- ◆ Compatible with downstream applications like 1D- and 2D-PAGE, MS, DIGE-labelling, HPLC

Storage temperature -15 °C to -25 °C

The fluorescent dye Deep Purple (marketed by GE) and LavaPurple (marketed by Gelcompany and SERVA) has been used by many laboratories for staining proteins in gels and on blotting membranes. The dye is based on a small naturally occurring fluorescent compound "Epicocconone" that reversibly binds to lysine, arginine, and histidine residues in proteins and peptides to yield an intensely red-fluorescent product. SERVA Purple is a further development of this compound "Epicocconone". It has improved properties due to a novel production and purification technology by unchanged cost-effectiveness compared to other fluorescence dyes or even silver staining.

- ◆ Environmentally friendly, easy to use
- ◆ Sensitivity to as low as 50 pg/band
- ◆ Linear quantification over 4 orders of magnitude
- ◆ Compatible with MS, DIGE-labelling
- ◆ After imaging gel can be further processed by Western Blotting

Total protein stain for non-denaturing and denaturing 1D and 2D gel electrophoresis and blotting. The dye reversibly binds to lysine, arginine, and histidine residues in proteins and peptides to yield an intensely red-fluorescent product ( $\lambda_{Ex}$  518 nm,  $\lambda_{Em}$  610 nm).

SERVA Purple HiSens shows highest sensitivity compared to most other protein stains. Even difficult to stain proteins as glycoproteins and lipoproteins can be accurately detected.

Although this modified version of SERVA Purple has a significantly increased sensitivity, its cost-effectiveness as against other fluorescent dyes or even silver staining is unchanged.

- ◆ Environmentally friendly, easy to use

### ■ SERVA Tris-Glycine/LDS Sample Buffer (4x)

HS 38220000

Storage temperature +2 °C to +8 °C

Modified sample buffer for SDS PAGE, delivered as 4x concentrate. Lithium dodecyl sulfate (LDS) replaces the commonly used sodium dodecyl sulfate (SDS) in the triethanolamine buffered sample buffer. LDS prevents degradation of proteins during sample preparation and heating and stabilizes the pH of the sample during gel run. It does not crystallize at lower temperatures due to significantly better solubility than SDS. Hence, protein stability as well as band resolution is significantly enhanced by cooled gel runs.

For reducing conditions the sample buffer may be supplemented with 10 mM DTT or 5 % β-mercaptoethanol (end concentration 1x sample buffer). Contains:

Triethanolamine buffered, 40 % glycerol, 4 % Ficoll® 400, 4 % LDS, 0.025 % phenol red and 0.025 % bromophenol.

**SERVA VisiBlot Standard I**

HS 38220000

Storage temperature -15 °C to -25 °C

VisiBlot Standard I is a mixture of 10 recombinant proteins of a molecular weight range from 25 kDa to 150 kDa. Protein bands of 25 kDa, 45 kDa and 85 kDa are prestained allowing monitoring of protein separation during SDS PAGE. The remaining five proteins contain several IgG binding sites. Hence marker proteins bind to primary or secondary antibodies used in Western Blotting facilitating easy marker visualization on the transfer membrane. Because the proteins have no chromophore attached, the marker enables accurate molecular weight estimation.

Recommended loading volume for a mini gel is 5 µl/lane.

- ♦ Ready-to-use, no reconstitution, further dilution or heating required
- ♦ Prestained bands for monitoring electrophoresis and membrane transfer
- ♦ Visualization of marker proteins on Western Blots by horseradish peroxidase or alkaline phosphatase-based immune-detection methods
- ♦ Molecular weight determination of proteins detected on transfer membrane

**SERVA White Light Table 22 x 28 cm**

HS 90278017

White light table with filter size of 22 x 28 cm. Suitable for digital image analysis and other daily routine work. Stainless steel filter frame and robust steel housing.

Cat.No.	Size
WL-28	1 piece

**SERVAColor BCIP/NBT Blot Solution**

HS 38220000

Storage temperature +2 °C to +8 °C

Ready-to-use, non-toxic, highly sensitive substrate solution for detection of alkaline phosphatase (AP) in membrane assays. Forms dark purple precipitates at the sites of AP activity on membranes.

- ♦ Rapid precipitate formation due to high activity
- ♦ High contrast due to very low background
- ♦ Long term stability at room temperature
- ♦ No significant fading after reaction stop

Cat.No.	Size

**SERVAGel™ IEF 3 - 10 precast gel, 10 sample wells**

HS 38220000

Storage temperature +2 °C to +8 °C \*

The precast gel SERVAGel™ IEF 3 - 10 is suitable for isoelectric focusing (IEF) in a pH range of 3 to 8.5 (Standard IEF) and 5.5 to 11 (non-equilibrium pH gradient electrophoresis, NEPHGE). For NEPHGE you change cathode and anode buffer as well as polarity of the electrophoresis chamber. In contrast to standard IEF, samples are loaded anodic, which enables an optimal separation of basic to very basic proteins.

### ■ SERVALight Polaris CL HRP WB Substrate Kit

HS 38220000

Storage temperature +2 °C to +8 °C

Highly sensitive enhanced chemiluminescence kit for the detection of immobilized proteins (Western Blot) or immobilized nucleic acids (Southern and Northern Blot) labelled directly with Horseradish Peroxidase (HRP) or indirectly with HRP-labelled antibodies/streptavidin.

The substrate is readily prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a one-to-one ratio. 0.1 ml substrate is sufficient for one cm<sup>2</sup> membrane.

- ◆ High sensitivity, low picogram limit of detection
- ◆ Long light emission for 6 hours
- ◆ Primary antibody dilution 1:1000 -1:5000
- ◆ Secondary antibody dilution 1:20.000 - 1:100.000
- ◆ Detection can be done by film or CCD imaging equipment

Cat.No.	Size
42584.01	100 ml
42584.02	250 ml
42584.03	500 ml

### ■ SERVALight Eos CL HRP WB Substrate Kit

HS 38220000

Storage temperature +2 °C to +8 °C

Very highly sensitive enhanced chemiluminescence kit for the detection of immobilized proteins (Western Blot) or immobilized nucleic acids (Southern and Northern Blot) labelled directly with Horseradish Peroxidase (HRP) or indirectly with HRP-labelled antibodies/streptavidin.

The substrate is readily prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a one-to-one ratio. 0.1 ml substrate is sufficient for one cm<sup>2</sup> membrane.

- ◆ Very high sensitivity, mid femtogram limit of detection
- ◆ Very long and steady light emission for 12 hours
- ◆ Primary antibody dilution 1:1000 -1:15.000
- ◆ Secondary antibody dilution 1:25.000 - 1:150.000
- ◆ Detection can be done by film or CCD imaging equipment

Cat.No.	Size
42585.01	50 ml
42585.02	250 ml

### ■ SERVALight EosUltra CL HRP WB Substrate Kit

HS 38220000

Storage temperature +2 °C to +8 °C

Ultrahigh sensitive enhanced chemiluminescence kit for the detection of immobilized proteins (Western Blot) or immobilized nucleic acids (Southern and Northern Blot) labelled directly with Horseradish Peroxidase (HRP) or indirectly with HRP-labelled antibodies/streptavidin.

The substrate is readily prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a one-to-one ratio. 0.1 ml substrate is sufficient for one cm<sup>2</sup> membrane.

SERVALight EosUltra substrate is optimized for maximum length of light emission and therefore ideal for detection by CCD imaging systems.

- ◆ Ultrahigh sensitivity, mid to low femtogram limit of detection
- ◆ Extremely long light emission at a very high signal level for 18 hours
- ◆ Primary antibody dilution 1:5000 -1:50.000
- ◆ Secondary antibody dilution 1:50.000 - 1:250.000
- ◆ Detection can be done preferably by CCD imaging equipment or film

Cat.No.	Size
42586.01	20 ml
42586.02	100 ml

**SERVALight Helios CL HRP WB Substrate Kit**

HS 38220000  
Storage temperature +2 °C to +8 °C

Extremely sensitive enhanced chemiluminescence kit for the detection of immobilized proteins (Western Blot) or immobilized nucleic acids (Southern and Northern Blot) labelled directly with Horseradish Peroxidase (HRP) or indirectly with HRP-labelled antibodies/streptavidin.

The substrate is readily prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a one-to-one ratio. 0.1 ml substrate is sufficient for one cm<sup>2</sup> membrane.

Due to the extremely high light output of the SERVALight Helios substrate very short exposure times or very high dilution of antibodies can be used. Especially when using film detection this is critical to receive optimal performance.

- ◆ Extreme sensitivity, low femtogram limit of detection
- ◆ Long light emission for 8 hours
- ◆ Primary antibody dilution 1:5000 -1:100.000
- ◆ Secondary antibody dilution 1:100.000 – 1:500.000
- ◆ Detection can be done preferably by CCD imaging equipment or film

Cat.No.	Size
42587.01	20 ml
42587.02	100 ml
42587.03	200 ml

**SERVALight Vega CL HRP WB Substrate Kit**

HS 38220000  
Storage temperature +2 °C to +8 °C

Highly sensitive enhanced chemiluminescence kit for the detection of immobilized proteins (Western Blot) or immobilized nucleic acids (Southern and Northern Blot) labelled directly with Horseradish Peroxidase (HRP) or indirectly with HRP-labelled antibodies/streptavidin. The substrate is readily prepared by mixing component A (luminol/enhancer solution) with component B (stabilized peroxide solution) in a one-to-one ratio. 0.1 ml substrate is sufficient for one cm<sup>2</sup> membrane.

- ◆ High sensitivity, mid picogram limit of detection
- ◆ Directly compatible with protocols of standard ECL WB substrates of other vendors
- ◆ Low background, high signal/noise ratio
- ◆ Working solution is stable for minimum 5 days – reproducible results, less waste
- ◆ Primary antibody dilution 1:100 -1:5000
- ◆ Secondary antibody dilution 1:1000 – 1:15.000
- ◆ Detection can be done by film or CCD imaging equipment

H340-H350 ♦ HS 38220000  
Storage temperature +2 °C to +8 °C

PAG Layer 150 µm; size 125 x 125 mm.  
Horizontal precast polyacrylamide gels for IEF. The ultra-thin layer guarantees short focusing and staining/destaining times with high resolution and band sharpness. Gels are cast on a stable, inert polyester support film. Therefore they are despite the thin layer easy to handle and protected against mechanical damages like e. g. ripping of the gel matrix. The thin cover sheet (GEL-FIX™ for covers) prevents the surface from drying out and damages.

### ■ SERVALYT™ PRECOTES™ Range pH 6-9

DANGER  
H340-H350 ♦ HS 38220000  
Storage temperature +2 °C to +8 °C

PAG Layer 300 µm; size 125 x 125 mm.  
Horizontal precast polyacrylamide gels for IEF. The ultra-thin layer guarantees short focusing and staining/destaining times with high resolution and band sharpness. Gels are cast on a stable, inert polyester support film. Therefore they are despite the thin layer easy to handle and protected against mechanical damages like e. g. ripping of the gel matrix. The thin cover sheet (GEL-FIX™ for covers) prevents the surface from drying out and damages.

### ■ SERVALYT™ PRECOTES™ CSF Kit

DANGER  
H340-H350 ♦ HS 38220000  
Storage temperature +2 °C to +8 °C

For cerebrospinal fluid (CSF) analysis by isoelectric focusing.  
The kit contains:

- ◆ 5 SERVALYT™ PRECOTES™ CSF gels 245 x 125 mm, 300 µm
- ◆ Anode and cathode buffer solutions
- ◆ Applicator strips and electrode wicks
- ◆ Optimized protocol for silver staining

### ■ SERVALYT™ PreNets™ pH 3-10

(PreNets™)  
HS 38220000  
Storage temperature +2 °C to +8 °C

PAG layer 300 µm, size: 125 x 125 mm.  
SERVALYT™ PreNets™ for subsequent blotting. They are precast gels, used in the same manner as the related SERVALYT™ PRECOTES™ except that the gel, supported by a NetFix™ polyester fabric, is permeable for electrotransfer. The gel layer is not covalently bound to the backing and is lifted off easily.

SERVALYT PreNets is a trademark of SERVA.

**SingleQuant Assay Kit**

DANGER  
H225-H314 ♦ HS 38220000  
Storage temperature +2 °C to +8 °C

Single tube format assay kit for protein quantification. The assay bases on the precipitation of proteins as insoluble dye complexes with acidic, ethanolic amido black 10B solution (1,2). After precipitation the protein-dye complexes are spinned down. The pellet is washed and resolubilized. The thereby released dye amount is measured at 624 nm.

- ♦ Precise, reproducible, reliable assay data
- ♦ Completed in only 45 min.
- ♦ No interference with detergents or reducing agents
- ♦ Detection range starts as low as 2 µg protein.

Water-soluble aminoglycoside antibiotic from *Streptomyces sp.* (1,2). Inhibitor of protein synthesis (3). Differs from other aminoglycoside derivatives in that it is bacteriostatic instead of bactericidal.

**Stock solution:** 10 mg/ml in distilled water, sterile filtered.

For molecular biology applications standard working concentration is 100 µg/ml and in cell culture 7.5 - 20 mg/l.

### ■ Spectra/Por® 1 dialysis tubing, MWCO 6000 - 8000

RC, diameter 6.4 mm

HS 39173200

Packed dry, with glycerol as protection for embrittlement, which can easily be removed by soaking in water. Contains low level of heavy metal and sulfide impurities.

Nominal dry flat width 10 mm  
Nominal dry diameter 6.4 mm  
Approx. filling volume 0.32 ml/cm  
Nominal dry wall thickness 30 - 50 µm

Endogenous polyamine that inhibits neuronal nitric oxide synthase (nNOS). It binds and precipitates DNA and may be used to purify DNA binding proteins. Additionally, spermidine stimulates T4 polynucleotide kinase activity. It is involved in growth, development, and the stress response in plants.

### Starter Kit: 2 Mini A and 2 Mini G Plugs

HS 38220000

The Mini Protein A & G spin column is the ideal tool for screening antibody expression and for small-scale purification of antibodies for solution-state immunoassays, immuno-histochemical and immuno-fluorescence studies, Western Blotting and immuno-precipitation studies. Antibodies are purified using a powerful, patented affinity spin column using a microfuge common to all biochemistry and immunology laboratories.

#### Contents:

Quantity: 2 x 0.23 Protein A Mini spin columns +  
2 x 0.23 Protein G Mini spin columns  
Max. sample volume per load: 0.65 ml, fixed angle rotor  
Collection tube: 2.2 ml microcentrifuge tubes  
Min. number of purifications: 12 purifications (3 uses per column)  
Typical capacity/preparation: 1 mg human IgG

### Steel Tray Multi 6 for up to 6 large gels, with 6 grids

HS 90272000

The MultiStainer is a stainless steel vessel with lid designed to stain up to six gels. The staining solution is stirred using a magnetic stir bar underneath the grid to ensure efficient mixing. The gels are positioned on stainless steel grids well separated from each other for simultaneously staining. Suitable for both cold and hot Coomassie® staining and for both backed and unbacked (slab) gels up to 20 cm x 26 cm in size.

Coomassie = registered trademark of ICI Ltd.

**Sulforhodamine B Cytotoxicity Assay**

HS 38220000

The Sulforhodamine B (SRB) Cytotoxicity Assay, developed in 1990, remains one of the most widely used methods for *in vitro* cytotoxicity screening. It relies on the ability of SRB to bind to protein components of cells fixed to tissue culture plates. SRB is a bright-pink aminoxanthene dye with two sulfonic groups that bind to basic amino acid residues under mild acidic conditions and dissociate under basic conditions. As the binding of SRB is stoichiometric, the amount of dye extracted from stained cells is directly proportional to the cell mass.

The fixed dye is solubilized and is measured photometrically at OD 540 nm with a reference filter of 690 nm. The OD values correlate with total protein content and therefore with cell number.

The assay is sensitive, simple, reproducible and more rapid with better linearity than the formazan-based assays. It has a good signal-to-noise ratio and has a stable end-point that does not require a time-sensitive measurement, as do the MTT or XTT assays.

**Content:** 0.4 g Sulforhodamine dye, 2x 50 ml Fixative Reagent, 2x 50 ml 10x Dye Wash Solution, 4x 50 ml SRB Solubilization Buffer

**Super Co-NTA Agarose Resin**

HS 38220000

Super Cobalt NTA Affinity Resin designed for affinity purification of polyhistidine tagged proteins. Cobalt ions are carefully loaded onto a 7.5 % cross-linked agarose matrix (medium particle diameter 40 µm) via a NTA coupled ligand to obtain a stable affinity matrix with the highest binding capacity for histidine residues (up to 10 mg/ml determined from *E. coli* cleared lysate). Other metal ions such as Ni<sup>2+</sup>, Zn<sup>2+</sup>, Fe<sup>3+</sup>, and Al<sup>3+</sup> can also be used resulting in different affinities. If required, the cobalt ions can be removed from the agarose matrix using 5 wash steps with 100 mM EDTA, and the matrix recharged with a different metal ion.

**Specifications**

Specificity: Polyhistidine tag  
 Matrix: 7.5 % cross linked agarose  
 Coupled ligand: Nitrilotriacetic acid (NTA)  
 Binding capacity: 30 mg/ml  
 Bead size: 32 – 60 µm (40 µm medium)  
 Flow rate: 0.25 – 1 ml/min (optimum), 6 ml/min (max.)  
 Maximum pressure: 72 psi  
 Buffer compatibility: Common aqueous buffers from pH 2 - 14  
 Cleaning buffer examples: 100 % methanol, 100 % ethanol, 8 M urea, 6 M guanidinium hydrochloride, 30 % (v/v) acetonitrile  
 Shipping/delivery: 50 % (v/v) resin suspension in 20 % ethanol at ambient temperature  
 Storage: Equilibration buffer at 2 - 8 °C (short-term) 20 % ethanol at 2 - 8 °C (long-term)

M<sub>r</sub> 27.000  
HS 35079090 \*

Recombinant TEV Protease is a highly site-specific cysteine protease, which is found in the Tobacco Etch Virus. Due to its sequence specificity, the enzyme is a very powerful reagent for removal of fusion tags from recombinant proteins after protein purification. The enzyme has been genetically modified to increase its activity and resistance to autolysis. It consists of the 27 kDa catalytic domain with an N-terminal polyhistidine tag. It recognizes a seven amino acid sequence of the general form Glu-X-X-Gln-Gly/Ser, most commonly Glu-Asn-Leu-Tyr-Phe-Gln-Gly, and cleaves between glutamine and glycine or serine. Using the polyhistidine tag at the N-terminus of the protease the enzyme can be easily removed from the cleavage reaction by affinity chromatography following digestion.

Specific activity: 10 U/μl, supplied with 1 ml 20x TEV Reaction Buffer and 100 mM DTT.

**Unit definition:** 1 unit cleaves >95 % of 3 μg control substrate in one hour at 30 °C.

Trypsin MS approved is suitable for digestion of proteins for mass spectrometry analysis. Reductive methylation of the lysine residues of trypsin results in a stable product that is extremely resistant to autolytic degradation. Trypsin MS approved is purified by chromatography. No chymotryptic activity is detectable. Every lot is approved for use in in-gel digestion and mass spectrometry analysis. Specificity verified by digestion of oxidized B-chain of insulin.

A Trypsin Peptide (TP) Standard is available separately (cat. no. 37285) allowing internal calibration for enhancing mass accuracy. The TP standard provides tryptic activity to generate masses  $m/z$  842 and 2211.

For the determination of urea (1).

**Unit definition:** 1 U catalyzes the formation of 1 µmole ammonia per minute at 25 °C, pH 8.0 from urea, determined in a coupled reaction with GLDH (2).

**Activity in other units:** If the unit of activity is defined in terms of 1 µmole urea decomposed per minute, this preparation would contain at least 90 units/mg.

■ **VitalStain Blue 520 for flow cytometry**

HS: 38220000

Storage temperature -15 °C to -25 °C

Fixable viability dyes allow accurate discrimination between live and dead cells in flow cytometric analysis, based on cell membrane integrity. The exclusion of dead cells from data allows a better identification of cell populations and provides an accurate determination of cell viability within samples.

VitalStain Blue 520 allows staining of live cells and preserve the staining pattern after fixation and/or permeabilization.

VitalStains fixable viability dyes are amine reactive and cell impermeable. Dead cells with compromised cell membranes are typically labelled to a higher extend due to reaction with intracellular amines resulting in highly fluorescent dead cells. Impermeable live cells are labelled only on the cell surface and show dim fluorescence.

VitalStain Blue 520 is excited by the blue 488 nm laser and bright fluorescence is detected in the FITC channel.

- ◆ High brightness for optimal differentiation between live and dead cells
- ◆ Ready-to-use kit, DMSO pre-diluted to test size formulation
- ◆ Unlike 7-AAD and PI, labelled cells can be fixed, permeabilized, washed and stained
- ◆ Suitable for any cell species

Cat.No.	Size

HS 39173300

The Xpress Micro Dialyzer MD100 is a ready-to-use dialysis system for sample volumes from 10 µl to 100 µl. Short diffusion distance and large surface area allow very rapid dialysis. The device consists of a U-shaped capillary made from polypropylene with graduation marks in 25 µl increments on both sides.

- ◆ High-quality regenerated cellulose membranes
- ◆ Efficient and fast dialysis – desalting of nucleic acids and proteins in ca. 30 min
- ◆ Up to 98 % sample recovery
- ◆ Easy handling – sample loading and retrieval can be done with standard laboratory micropipettes
- ◆ Compatible with 96-well deep well plates and 8-channel multipipettes
- ◆ Flexible – dialysis against small volumes in micro tubes or microtiter plates and against larger volumes (with floating device) possible

### ■ Xpress Micro Dialyzer MD100, MWCO 6 - 8 kDa

single fingers in microtube

HS 39173300

The Xpress Micro Dialyzer MD100 is a ready-to-use dialysis system for sample volumes from 10 µl to 100 µl. Short diffusion distance and large surface area allow very rapid dialysis. The device consists of a U-shaped capillary made from polypropylene with graduation marks in 25 µl increments on both sides.

- ◆ High-quality regenerated cellulose membranes
- ◆ Efficient and fast dialysis – desalting of nucleic acids and proteins in ca. 30 min
- ◆ Up to 98 % sample recovery
- ◆ Easy handling – sample loading and retrieval can be done with standard laboratory micropipettes
- ◆ Flexible – dialysis against small volumes in micro tubes or microtiter plates and against larger volumes (with floating device) possible

**Content:** 12 single microdialysis devices in 2 ml microcentrifuge tube

### ■ Xpress Dialysis Magnetic Mixing Box MD100, MWCO 2 kDa

HS 39173300

All-in-one kit for accelerated high-throughput dialysis (sample volume 10 µl - 100 µl).

The especially designed dialysis box allows a greater buffer volume and better mixing through a magnetic stirrer bar compared to dialysis in a microtiter plate. This enables high-throughput dialysis of small sample volumes with reduced handling and accelerated dialysis time. Because the samples are in connection via the dialysis buffer, the dialysis device is especially suitable for samples with the same or similar salt content or buffer.

**Content:**

- ◆ 12 cartridges (detachable 8-micro dialyzer strips) in handling box

**Xpress Micro Dialyzer MD300, MWCO 12 - 14 kDa**  
1 cartridge  
HS 39173300

The Xpress Micro Dialyzer MD300 is a ready-to-use dialysis system for sample volumes from 50 µl to 300 µl. Short diffusion distance and large surface area allow very rapid dialysis. The device consists of a U-shaped capillary made from polypropylene with graduation marks in 75 µl increments on both sides.

- ◆ High-quality regenerated cellulose membranes
- ◆ Efficient and fast dialysis – desalting of nucleic acid and proteins in ca. 30 min
- ◆ Up to 98 % sample recovery
- ◆ Easy handling – sample loading and retrieval can be done with standard laboratory micropipettes
- ◆ Compatible with 96-well deep well plates and 8-channel multipipettes
- ◆ Flexible – dialysis against small volumes in micro tubes or microtiter plates and against larger volumes (with floating device) possible

**Xpress Dialysis Magnetic Mixing Box MD300, MWCO 2 kDa**

HS 39173300

All-in-one kit for accelerated high-throughput dialysis (sample volume 50 µl - 300 µl). The especially designed dialysis box allows a greater buffer volume and better mixing through a magnetic stirrer bar compared to dialysis in a microtiter plate. This enables high-throughput dialysis of small sample volumes with reduced handling and accelerated dialysis time. Because the samples are in connection via the dialysis buffer, the dialysis device is especially suitable for samples with the same or similar salt content or buffer.

**Content:**

- ◆ 12 cartridges (detachable 8-micro dialyzer strips) in handling box
- ◆ Dialysis box

HS 39173300

The Xpress Equilibrium Dialyzer ED300 is a ready-to-use dialysis system for sample volumes from 50 µl to 300 µl. Short diffusion distance and large surface area allow very rapid dialysis. The device consists of a U-shaped capillary made from polypropylene with graduation marks in 75 µl increments on both sides. Optimized design for fast and easy equilibrium dialysis.

- ◆ High-quality regenerated cellulose membranes
- ◆ Efficient and fast dialysis – desalting of nucleic acids and proteins in ca. 30 min
- ◆ Up to 98 % sample recovery
- ◆ Easy handling – sample loading and retrieval can be done with standard laboratory micropipettes
- ◆ Ideally suited for dialysis in liquid handling systems
- ◆ Automation compatible – plate format conforms to the SBS Microplate Standard

This enables high-throughput dialysis of small sample volumes with reduced handling and accelerated dialysis time. Because the samples are in connection via the dialysis buffer, the dialysis device is especially suitable for samples with the same or similar salt content or buffer.

### ■ Xpress Dialysis Magnetic Mixing Box ED300, MWCO 3.5 kDa

HS 39173300

All-in-one kit for accelerated high-throughput dialysis (sample volume 50 µl - 300 µl). Optimized design for fast and easy equilibrium dialysis. The especially designed dialysis box allows a greater buffer volume and better mixing through a magnetic stirrer bar compared to dialysis in a microtiter plate. This enables high-throughput dialysis of small sample volumes with reduced handling and accelerated dialysis time. Because the samples are in connection via the dialysis buffer, the dialysis device is especially suitable for samples with the same or similar salt content or buffer.

### ■ Xpress Mini Dialyzer MD1000, MWCO 2 kDa

single fingers in tube

HS 39173300

The Xpress Mini Dialyzer MD1000 is a ready-to-use dialysis system for sample volumes from 150 µl to 1000 µl. Short diffusion distance and large surface area allow very rapid dialysis. The device has two capillary channels, one for sample loading and one for filling of the dialysis buffer. The Mini Dialyzer MD1000 is easily coupled to a strip by a key/slot mechanism.

- ◆ High-quality regenerated cellulose membranes
- ◆ Efficient and fast dialysis, easy change of dialysis buffer
- ◆ Up to 98 % sample recovery
- ◆ Easy handling – sample loading and retrieval can be done with standard laboratory micropipettes
- ◆ Scalable from 1 to 48 samples
- ◆ Compatible with standard 48-well deep well plates

**Content:** 6 single Mini Dialyzer in 25 ml skirted, conical tubes

### ■ XTT Cell Proliferation Assay

HS 38220000

Storage temperature -15 °C to -25 °C

The XTT Cell Proliferation Assay is a colorimetric assay that detects the cellular metabolic activities. During the assay, the yellow tetrazolium salt XTT is reduced to a highly coloured formazan dye by dehydrogenase enzymes in metabolically active cells. This conversion only occurs in viable cells and thus, the amount of the formazan produced is proportional to viable cells in the sample. The formazan dye formed in the assay is soluble in aqueous solution and can be quantified by measuring the absorbance at wavelength 450 nm using a spectrophotometer. An electron coupling reagent, such as N-methylphenazonium methyl sulfate (PMS) can significantly improve the efficiency of XTT reduction in cells.

- ◆ Easy to use - no need for additional reagents and washing procedures
- ◆ Rapid and sensitive – no solubilisation step, works with low cell concentrations
- ◆ Accurate – dye absorbance proportional to the number of cells/well

- 10 g/l Yeast extract
- 5 g/l NaCl

For making 1 L 2x liquid medium suspend 31 g in 900 ml distilled water, adjust the pH to 7.0 with approximately 0.2 ml of 5 N NaOH, fill up to a final volume of 1 L with deionized water and sterilize by autoclaving.

**Zymolyase® from *Arthrobacter luteus*, min. 20 U/mg lyophil.**

(Lyticase, β-1,3-Glucanlaminaripentaohydrolase)

DANGER

H334

CAS [37340-57-1] ♦ HS 35079090

Zymolyase®, produced by a submerged culture of *Arthrobacter luteus* (1), has strong lytic activity against living yeast cell walls to produce protoplast or spheroplast of various strains of yeast cells (2, 3).

This enzyme is prepared by ammonium sulfate precipitation. The essential enzyme activity for the lysis of yeast cells is β-1,3-glucan laminaripentaohydrolase. It hydrolyzes linear glucose polymers with β-1,3-linkages and releases specifically laminaripentaose as the main and minimum product unit (4, 5). Lytic activity varies depending on yeast strain, growth stage of yeast, or cultural conditions (6, 7, 8). Contained main side activities are β-1,3-glucanase, protease, and mannanase (3).

At 30 °C about 70 % of the lytic activity is lost after 3 months and at 60 °C after 5 minutes all the lytic activity is lost. For lysis of viable cells the optimum temperature is 35 °C at pH 7.5 and for hydrolysis of yeast glucan 45 °C at pH 6.5.

Zymolyase® was shown to lyse *Ashbya*, *Candida*, *Debaryomyces*, *Eremothecium*, *Endomyces*, *Hansenula*, *Hanseniaspora*, *Kloeckera*, *Kluyveromyces*, *Lipomyces*, *Metschikowia*, *Pichia*, *Pullularia*, *Torulopsis*, *Saccharomyces*, *Saccharomycopsis*, *Saccharomyces*, *Schwanniomyces*, etc. (5). It is activated by a SH compound such as cysteine, 2-mercaptoethanol or dithiothreitol.

**Unit definition:** One unit of lytic activity is defined as the enzyme amount causing a decrease of 30 % in absorbance at 800 nm using 6 mg Brewer's yeast as substrate in phosphate buffer (pH 7.5) at 25 °C.

Zymolyase®, produced by a submerged culture of *Arthrobacter luteus* (1), has strong lytic activity against living yeast cell walls to produce protoplast or spheroplast of various strains of yeast cells (2, 3).

This enzyme is prepared by ammonium sulfate precipitation and further purified by affinity chromatography. The essential enzyme activity for the lysis of yeast cells is  $\beta$ -1,3-glucan laminaripentaohydrolase. It hydrolyzes linear glucose polymers with  $\beta$ -1,3-linkages and releases specifically laminaripentaose as the main and minimum product unit (4, 5).
